METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 9th October, 1909:—

"The atmosphere was in a very disturbed state over Northwestern Europe throughout this week, and several large and deep depressions passed in a northerly or northeasterly direction across the British Isles and the adjacent Ocean. The first of these disturbances skirted the western shores of Ireland and Scotland on Sunday. Its S.W. winds caused the thermometer to rise in Dublin to 66°7 on the afternoon of that day. The accompanying rainfall was slight (·029 inch) in this City, but heavy in Anglesey and Lancashire (·73 inch at Holyhead and ·61 inch at Liverpool). Monday was a fine, warm day; but by Tuesday morning the centre of a new large and deep depression had arrived off the north of Ireland, the barometer at 7 a.m. reading as low as 28·86 inches at Malin Head—even in Dublin the mercury sank to 29·062 inches at 8.40 a.m. Squalls and heavy showers of rain and, in places, hail accompanied this depression, which travelled due north, leaving a 'cold snap' in its wake. Wednesday was a fine day, the air being dry and the atmosphere clear. On Thursday morning a rapid fall of the barometer ushered in another Atlantic depression, with clouds, rain, and squalls from S. and S.W. Its warm winds sent the thermometer up to 66° in Dublin in the afternoon. Again came a brief interval of fair weather on Friday, but Saturday was very changeable, a fair sunny morning being succeeded by clouds, rain, and fresh southerly winds as a final disturbance spread in from the Atlantic. In Dublin the mean height of the barometer was 29·610 inches, the range of pressure being from 29·062 inches at 8.40 a.m. of Tuesday (wind, W.S.W.) to 30·102 inches at 9 p.m. of Friday (wind, S.W.). The corrected mean temperature was 55·6°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 55·2°. On Sunday the screened thermometers rose to 66·7°, on Wednesday they fell to 44·0°. The dominant wind was S.W. Rain fell on six days to the amount of ·261 inch, the heaviest fall in 24 hours being ·091 inch on Tuesday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.446 inches. The highest reading (29.937) was on Friday at 9 p.m., air calm, and the lowest (28.899) on Tuesday at 9 a.m., wind S.W.

The mean temperature for the week was 53.2°, being 1.7° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 66.0°, and was lowest on Saturday, the mercury having fallen to 38.9°. The mean of the Dry Bulb for the week was 54.5° and of the Wet Bulb 51.9°. The mean humidity of the air was .83, complete saturation being represented by 1.0. The rainfall during the week measured 0.396 inch.

At Greenwich the mean temperature for the week was 55.8°, the maximum 68.0°, and the minimum 39.2°; at Glasgow the maximum was 64.0°, the minimum 43.0°, and the mean 54.8°; and at Edinburgh the maximum was 63.9°, the minimum 40.5°, and the mean 53.8°. The rainfall at Greenwich measured 1.01 ins.; at Glasgow, 0.27 in.; and at Edinburgh, 0.37 in.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 16TH OCTOBER, 1909.

[No. 41.]

General Register Office, Charlemont House,
Dublin, 18th October, 1909.

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 15·2 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 28'0 | 14'0 | 18'7 | 14'0 | 18'7 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·3 per 1,000, the rates varying from 0·0 in thirteen of the districts to 6·6 in Queenstown, the 3 deaths from all causes for that district including one from diarrhœa. Among the 104 deaths from all causes for Belfast are 2 from whooping-cough, 3 from enteric fever and 5 from diarrhœal diseases. Of the 31 deaths from all causes for Cork 4 are from diarrhœal diseases. Included in the 17 deaths from all causes for Limerick are 3 from whooping-cough. One death from enteric fever is included in the 4 deaths from all causes for Drogheda and there is also one death from enteric fever among the 3 deaths from all causes for Newry. Of the 5 deaths from all causes for Lurgan one is from diphtheria, and of the 5 deaths from all causes for Newtownards one is from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 184—90 boys and 94 girls—and the deaths to 127—62 males and 65 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 16·6 in every 1,000 of the population; omitting the deaths (numbering 5) of persons admitted into public institutions from localities outside the Area, the rate was 16·0 per 1,000. During the forty-one weeks ending with Saturday last, the death-rate averaged 22·1, and was 2·5 below the mean for the corresponding portions of the ten years 1899-1908.

The total deaths included one from each of scarlet fever, diphtheria and enteric fever; deaths from diarrhoeal diseases (3 deaths from enteritis and 2 deaths from *gastro-enteritis*); 16 infants under one year of age were also registered) and 3 deaths from influenza. In the three preceding weeks, deaths from scarlet fever were one, 0 and 0; deaths from diphtheria were 2, one and one; deaths from enteric fever were 2, one and 0; deaths from diarrhoeal diseases were 6, 5 and 5; and deaths from influenza were 0, 0 and 0, respectively.

There was one death from broncho-pneumonia, and there were 4 deaths from *pneumonia* (not defined).

Deaths from tuberculous disease (all forms) declined to 15, from 30, 22, and 22 deaths registered in the three preceding weeks respectively. The 15 deaths include 12 from tuberculous phthisis (*phthisis*), one from tuberculous meningitis, one from tuberculous peritonitis and one from general tuberculosis.

One death was attributed to carcinoma and 7 deaths to cancer (undefined).

Prematurity was assigned as the cause of deaths of 3 infants.

Of 11 deaths from diseases of the brain and nervous system 2 were of infants under one month of age, one aged one year and one aged 5 years from *convulsions*.

Diseases of the heart and blood vessels caused 18 deaths, and bronchitis accounted for 6 deaths of 11 persons.

There was one death from an accident caused by being struck by a piece of metal.

In four instances the cause of death was "uncertified," there having been no medical attendance during the last illness; these cases include the deaths of 3 infants under one year of age.

Thirty-six of the persons whose deaths were registered during the week were under 6 years of age (28 being infants under one year, of whom 9 were under one month old) and 4 were aged 60 years and upwards, including 25 persons aged 70 and upwards, of whom 4 were octogenarians and two (a male and a female) were stated to have been aged 91 and 93 respectively.

Forty-nine of the deaths registered during the week occurred in hospitals and other public institutions; of this number 16 took place in the North Dublin Union Workhouse and in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so attributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 16·0 per 1,000; the rate in the City was 16·0 (North City Districts, 17·6; South, 15·3) and in the Suburbs, 14·3.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 0·9 per 1,000 inhabitants, the rate for the City being 1·0 (1·3 in the North City Districts, and 0·7 in the South), and for the Suburbs, 0·6 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (5) are equal to an annual rate of 8·8 per 1,000. *Diarrhoea* and influenza each caused one death.

No. 1 North City District, West (Summer-hill).—The deaths (10) are equal to an annual rate of 13·2 per 1,000. The one death from influenza, *phthisis* caused one death and bronchitis 2 deaths.

No. 2 North City District (Lisburn-street).—The deaths (12) are equivalent to an annual rate of 20·6 per 1,000, and include 2 deaths from *diarrhoea*, one death from broncho-pneumonia, 2 deaths from tuberculous phthisis (*phthisis*) and 2 deaths from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (19) represent an annual rate of 29·8 per 1,000. Epidemic enteritis and influenza each caused one death, also one death from *pneumonia* (not defined), one death from *phthisis*, one death from bronchitis, and one accidental death were recorded.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants; Coolock and Drumcondra, part of, 9·1; and Finglas and Glasnevin, part of, 27·4. Of the 4 deaths from all causes for the last-named District one was caused by tuberculous phthisis.

No. 1 South City District (South Earl-street).—The deaths (11) represent an annual rate of 14·0 per 1,000. Among the deaths were 3 from tuberculous phthisis and one from *pneumonia* (not defined).

No. 2 South City District (Castle-street).—The deaths (5) are equal to an annual rate of 12·1 per 1,000. Diphtheria caused one death as did also each of the following diseases:—*pneumonia* (not defined), tuberculous meningitis and bronchitis.

No. 3 South City District (Peter-street).—The deaths (14) are equal to an annual rate of 17·1 per 1,000. The deaths include one from *pneumonia* (not defined), 2 from tuberculous phthisis, one from tuberculous peritonitis, and 3 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (11) are equivalent to an annual rate of 16·2 per 1,000. Scarlet fever caused one death, there was one death from *phthisis*, also one death from bronchitis.

New Kilmainham District.—The deaths (3) are equal to an annual rate of 17·4 per 1,000. The 3 deaths include 2 deaths from bronchitis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathfarnham, 12·8; Pembroke, 11·0; Blackrock, 29·8; and Kingstown, 14·8. The only death from any of the principal epidemic diseases tabulated for these districts was one from enteric fever for Kingstown. Among the 9 deaths from all causes for Rathmines and Rathfarnham was one from *phthisis*; and the 5 deaths from all causes for Kingstown include one from general tuberculosis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," and the "Tuberculosis Prevention (Ireland) Act, 1908," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area. (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 16th October, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) From 1st October, 1909.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 16th October, 1909.

From this it appears that:—

One case of measles was admitted to hospital during the week, and 5 cases remained under treatment at its close.

Twenty-five cases of scarlet fever were admitted to hospital, 22 were discharged, there were 2 deaths, and 84* cases remained under treatment at the close of the week.

One case of typhus was admitted to hospital during the week, and 8 cases remained under treatment at its close.

Seven cases of diphtheria were admitted to hospital, 8 were discharged, and 34 patients remained under treatment at the close of the week.

Seven cases of enteric fever were admitted to hospital during the week, 7 were discharged, and 55 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 7 cases of pneumonia were admitted to hospital, 4 were discharged, there was one death, and 21 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 12.0) was equal to an average annual death-rate of 12.2 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12.8 per 1,000, the rate for Glasgow being 13.7 and for Edinburgh 12.6.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 16th October. From this Report it appears that of a total of 61 cases notified, 41 were scarlet fever, 9 phthisis, 6 diphtheria, 4 erysipelas, and one enteric fever. Among the 432 cases of infectious diseases in hospital at the close of the week were 257 cases of scarlet fever, 58 of measles, 40 of diphtheria, 38 of phthisis, 15 of whooping-cough, 10 of erysipelas, 9 of enteric fever, and 3 of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 15th October, 1909, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned PRINCIPAL DISTRICTS (exclusive of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the number of Deaths from **Rainfall** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 16th October, 1909:—

"Cyclonic conditions held throughout this week over Northwestern Europe. The weather was very unsettled, squally S.W. winds, frequent showers or rainfalls, and electrical disturbances prevailing day after day. Iceland was generally the central area of the low pressure systems which determined the strong winds and showers of the period in the British Isles—in proof of this the morning readings of the barometer at Reykjavik up to Friday may be quoted as follow: 28·88 inches, 29·19, 28·77, 29·08, 28·93, and 28·80, respectively. A powerful contributory factor in the production of the strong winds of the period was the development of the usual winter anticyclone over Russia early in the week—on Wednesday morning the barometer stood at 30·5 inches or upwards over the central regions of that country. On Tuesday afternoon a secondary depression crossed Ireland, reaching the Irish Sea next morning. This system caused thunderstorms of some violence in Ireland, Wales, and Scotland, hail also falling in several places. The most important disturbance of the week was that which spread southeastwards from Iceland on Thursday. Its centre reached Thorshavn (Faerø) at 7 a.m. of Friday, when the barometer read only 28·47 inches at that place, whereas it stood as high as 30·34 inches at Belfort in the East of France. On this day the weather moderated in Ireland, becoming fine and dry, while strong winds and showers still prevailed in Great Britain. Saturday was changeable owing to the approach of a new low pressure system from the Atlantic. In Dublin the mean height of the barometer was 29·570 inches, pressure ranging between 29·822 inches at 9 a.m. of Thursday and 29·415 inches at 9 p.m. of Tuesday (wind, S.W. on both occasions). The corrected mean temperature was 54·1°, the mean of the dry bulb readings at 9 a.m. and 9 p.m. being 53·4°. The screened thermometers rose to 63·5° on Sunday and fell to 45·9° on Wednesday. Rain fell on 5 days to the amount of 6·17 inch, 3·18 inch being measured on Tuesday. The prevalent wind was S.W."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.410 inches. The highest reading (29.663) was on Thursday at 9 a.m., wind S.S.W., and the lowest (29.256) on Monday at 9 a.m., wind S.S.E.

The mean temperature for the week was 52.5°, being 2.3° above the average for the corresponding period of the 10 years 1899–1908. The temperature was highest on Sunday, on which day the thermometer registered 62.3°, and was lowest on Thursday, the mercury having fallen to 41.1°. The mean of the Dry Bulb for the week was 52.3° and of the Wet Bulb 49.8°. The mean humidity of the air was .84, complete saturation being represented by 1.0. The rainfall during the week measured 0.772 inch.

At Greenwich the mean temperature for the week was 56.4°, the maximum 65.9°, and the minimum 39.7°; at Glasgow the maximum was 61.0°, the minimum 43.9°, and the mean 52.0°; and at Edinburgh the maximum was 62.2°, the minimum 41.7°, and the mean 50.9°. The rainfall at Greenwich measured 0.59 in.; at Glasgow, 2.61 ins.; and at Edinburgh, 2.57 ins.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 23RD OCTOBER, 1909.

[No. 42.]

*General Register Office, Charlemont House,
Dublin, 25th October, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 14·8 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Kilkenny, . . . | . . . | 19·7 | . . . | 19·7 | 9·9 | Waterford, . . . | 19·5 | 3·9 | 15·6 | 19·5 | 14·6 |
| | | | | | | Wexford, . . . | 14·0 | 18·7 | 14·0 | 14·0 | 15·2 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in twelve of the districts to 6·6 in Queenstown, the 4 deaths from all causes for that district including one from diarrhoea. Among the 96 deaths from all causes for Belfast are 5 from diarrhoeal diseases. Of the 31 deaths from all causes for Cork 2 are from whooping-cough and 2 from diarrhoeal diseases. Of the 11 deaths from all causes for Limerick 2 are from whooping-cough. One death from measles is included in the 5 deaths from all causes for Galway. Of the 3 deaths from all causes for Ballymena one is from diphtheria, and one of the 2 deaths from all causes for Clonmel is also from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 226—126 boys and 100 girls—and the deaths to 124—62 males and 62 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 16·2 in every 1,000 of the population; omitting the deaths (numbering 8) of persons admitted into public institutions from localities outside the Area, the rate was 15·2 per 1,000. During the forty-two weeks ending with Saturday last, the death-rate averaged 22·0, and was 2·5 below the mean rate for the corresponding portions of the ten years 1899-1908.

The total deaths included one death from each of the following diseases:—scarlet fever, typhus, and whooping-cough, and 2 deaths from *diarrhoea* (there were also registered 2 deaths from *gastro-enteritis* and one death from enteritis—all of infants under one year of age). Deaths from scarlet fever in each of the three preceding weeks were 0, 0, and one; deaths from typhus were one, 0, and 0; deaths from whooping-cough were 2, 3, and 0; and deaths from diarrhoeal diseases were 5, 5, and 4, respectively.

There were 5 deaths from broncho-pneumonia, and 2 deaths from *pneumonia* (not defined).

Deaths from all forms of tuberculous disease amounted to 29, having been 22, 22, and in each of the three preceding weeks. The 29 deaths included 25 from tuberculous phthisis (*phthisis*), 3 from tuberculous meningitis and one death from general tuberculosis.

Of 3 deaths from malignant disease, 2 were from carcinoma and one was from cancer (undefined).

The deaths of 6 infants, prematurely born, were registered.

Diseases of the brain and nervous system caused 10 deaths; of this figure 2 were deaths of infants under one year of age from *convulsions*.

There were 19 fatalities from diseases of the heart and blood vessels, and bronchitis caused the deaths of 8 persons.

Of 4 deaths assigned to accidental causes, one was by a motor car and one was by burning.

In four instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 3 infants under one year of age and the death of one person aged 65 years.

Forty-one of the persons whose deaths were registered during the week were under years of age (35 being infants under one year, of whom 13 were under one month old) and were aged 60 years and upwards, including 18 persons aged 70 and upwards, of whom were octogenarians.

Forty-two of the deaths registered during the week occurred in hospitals and other public institutions; of this number 6 took place in the North Dublin Union Workhouse and 11 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week: deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 15·2 per 1,000; the rate in the City was 14·6; South, 19·3; and in the Suburbs, 8·6.

The deaths from certain epidemic diseases in the entire area equal an annual rate of 0·7 per 1,000 inhabitants, the rate for the City being 0·8 (1·0 in the North City Districts, and 0·7 in the South), and for the Suburbs, 0·0.

No. 1 North City District, East (Clarence-street, North).—The deaths (7) are equal to an annual rate of 12·3 per 1,000 and include one death from *diarrhoea*, one from broncho-pneumonia, and 3 deaths from tuberculous disease.

No. 1 North City District, West (Summer-hill).—The deaths (9) are equal to an annual rate of 11·9 per 1,000. There were 2 deaths from broncho-pneumonia and 3 from tuberculous disease.

No. 2 North City District (Lisburn-street).—The deaths (15) are equivalent to an annual rate of 25·7 per 1,000. Typhus caused one death, *pneumonia* (not defined), one death, tuberculous disease, 3 deaths and bronchitis 2 deaths.

No. 3 North City District (Benburb-street).—The deaths (7) represent an annual rate of 11·0 per 1,000. Of the total one death was caused by *diarrhoea*, one by *phthisis*, and one by accidental burning.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19·6 per 1,000 inhabitants; Coolock and Drumcondra, No. 1, part of, 18·1; and Finglas and Glasnevin, part of, 0·0.

No. 1 South City District (City District) (South Earl-street).—The deaths (22) represent an annual rate of 28·0 per 1,000. Tuberculous phthisis (*phthisis*) caused 6 deaths and there was one death from broncho-pneumonia.

No. 2 South City District (Castle-street).—The deaths (7) are equal to an annual rate of 17·0 per 1,000. The total includes one death from whooping-cough.

No. 3 South City District (Peter-street).—The deaths (9) are equal to an annual rate of 11·0 per 1,000. Broncho-pneumonia and *pneumonia* (not defined) each caused one death, there was one death from tuberculous meningitis and 2 deaths were from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (15) are equivalent to an annual rate of 22·0 per 1,000. The deaths included one death from scarlet fever, 4 deaths from tuberculous phthisis (*phthisis*) and one death from bronchitis.

New Kilmainham District.—The deaths (4) are equal to an annual rate of 23·2 per 1,000. Of the 4 deaths registered 3 were from tuberculous phthisis (*phthisis*).

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathfarnham, 8·6; Pembroke, 7·3; Blackrock, 0·0; and Kingstown, 14·8. There was no death from any of the principal epidemic diseases tabulated for these districts. Among the 6 deaths from all causes for Rathmines and Rathfarnham was one from bronchitis; the 4 deaths from all causes for Pembroke included one death from *phthisis*, one from bronchitis, and one from accidental death; and of the 5 deaths from all causes for Kingstown 2 were from tuberculous phthisis and one from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," and the "Tuberculosis Prevention (Ireland) Act, 1908," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz. :—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 23rd October, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) From 1st October, 1909.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 23rd October, 1909.

From this it appears that:—

Five cases of measles remained under treatment in hospital at the close of the week.

Seventeen cases of scarlet fever were admitted to hospital, 18 were discharged, there was one death, and 82* cases remained under treatment at the close of the week.

One death from typhus occurred in hospital during the week, and 7 cases remained under treatment at its close.

Twelve cases of diphtheria were admitted to hospital, 5 were discharged, and 41 patients remained under treatment at the close of the week.

Fourteen cases of enteric fever were admitted to hospital during the week, 11 were discharged and 58 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 9 cases of pneumonia were admitted to hospital, 6 were discharged, there was one death, and 23 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 11·5) was equal to an average annual death-rate of 12·0 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 13·1 per 1,000, the rate for Glasgow being 14·8 and for Edinburgh 10·4.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 23rd October. From this Report it appears that of a total of 74 cases notified, 44 were scarlet fever, 11 phthisis, 11 diphtheria, 7 erysipelas, and one enteric fever. Among the 451 cases of infectious diseases in hospital at the close of the week were 269 cases of scarlet fever, 63 of measles, 39 of phthisis, 37 of diphtheria, 14 of whooping-cough, 14 of erysipelas, 10 of enteric fever, 2 of cerebro-spinal fever, and one of chicken-pox.

* See note (a) at foot of Table XII.

TABLE II.—BIRTHS AND DEATHS registered during the Week ending Saturday, 23rd October, 1909, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions and Rainfall for each of the two weeks immediately preceding.

| TOWNS AND DISTRICTS | REGISTRATION—WEEK ENDING SATURDAY, 23RD OCTOBER, 1909. | | | | | | | | | | METEOROLOGY. METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 23rd October, 1909:—

"The record this week is again one of very unsettled, squally, rainy weather—only on Monday afternoon and on Wednesday morning was the sky free from cloud in Dublin. Atmospheric pressure was in very unstable equilibrium throughout, and depressions passed in succession north-eastwards over the Atlantic Ocean and Norwegian Sea, throwing off secondary systems, which crossed the British Isles from time to time. A high pressure system formed suddenly over France on Thursday, so that at 7 a.m. of Friday the barometer stood above 30.4 inches in the centre of that country, and the isobar of 30.3 inches lay upon the Straits of Dover. This high pressure area only caused steeper baric gradients in the British Isles, with the result that the S.W. wind freshened to gale force at some exposed stations in the course of Friday. The first of the atmospheric disturbances of the period was a complex low pressure system which spread in over the British Isles and France on Sunday. Its winds were not strong except in the English Channel, and its arrival led to close, muggy, wet weather. On Monday its northerly winds brought a brief spell of fine and cooler weather to Ireland, but the wind quickly returned to S.W. and Tuesday was dull, wet, and warm. At 4.40 a.m. of Wednesday the barometer ranged from 28.88 inches at Thorshavn (Faerø) to 30.25 inches at Munich. At 7 a.m. of Wednesday there was a beautiful display of festooned (mammillated) clouds in Dublin, temperature of the lower atmosphere falling briskly. Thursday was showery and squally, and hail fell at 3 p.m. A gale from S.W. prevailed from time to time on Friday. Rain fell heavily on Saturday morning until 11.30 a.m., the measurement exceeding eight-tenths of an inch. The afternoon was showery and squally, and at 7 p.m. lightning was seen at Holyhead. In Dublin the mean atmospheric pressure was 29.649 inches, the range being from 29.283 inches at 3 p.m. of Sunday (wind, S.S.E.) to 30.041 inches at 9 p.m. of Thursday (wind, W.S.W.). The corrected mean temperature was 52.8°, the mean dry bulb temperature at 9 a.m. being 51.8°. The screened thermometers rose to 62.3° on Wednesday and fell to 43.9° on Thursday. S.W. winds prevailed. Rain fell daily to the large amount of 1.573 inches, .494 inch being measured on Saturday. Aurora borealis was seen on Monday and Wednesday nights."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.491 inches. The highest reading (29.878) was on Thursday at 9 p.m., wind S.W., and the lowest (29.176) on Sunday at 9 a.m., air calm.

The mean temperature for the week was 51.1°, being 2.8° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Wednesday, on which day the thermometer registered 62.6°, and was lowest on Sunday, the mercury having fallen to 41.2°. The mean of the Dry Bulb for the week was 50.8° and of the Wet Bulb 48.8°. The mean humidity of the air was .86, complete saturation being represented by 1.0. The rainfall during the week measured 1.896 inches.

At Greenwich the mean temperature for the week was 55.7°, the maximum 64.0°, and the minimum 45.4°; at Glasgow the maximum was 60.0°, the minimum 42.7°, and the mean 50.4°; and at Edinburgh the maximum was 58.2°, the minimum 39.8°, and the mean 50.2°. The rainfall at Greenwich measured 0.46 in.; at Glasgow, 1.45 ins.; and at Edinburgh, 1.50 ins.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 30TH OCTOBER, 1909.

[No. 43.]

*General Register Office, Charlemont House,
Dublin, 1st November, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 16·4 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Kilkenny, . . . | 19·7 | . | 19·7 | 4·9 | 11·1 | | | | | | |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·2 per 1,000, the rates varying from 0·0 in twelve of the districts to 5·8 in Waterford, the 6 deaths from all causes for that district including one from whooping-cough and 2 from diarrhœal diseases. Among the 116 deaths from all causes for Belfast are 5 from whooping-cough, 3 from diarrhœal diseases, and one from cerebro-spinal fever. Of the 13 deaths from all causes for Londonderry are one from diphtheria and one from diarrhœa. Three deaths from whooping-cough are included in the 14 deaths from all causes for Limerick. Of the 4 deaths from all causes for Dundalk one is from measles, and of the 2 deaths from all causes for Lisburn one is from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 203—99 boys and 104 girls—and the deaths to 148—79 males and 69 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 19·4 in every 1,000 of the population; omitting the deaths (numbering 6) of persons admitted into public institutions from localities outside the Area, the rate was 18·6 per 1,000. During the forty-three weeks ending with Saturday last, the death-rate averaged 21·9, and was 2·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

Included in the total deaths from all causes registered were one from each of whooping-cough and enteric fever, and 3 deaths from infective enteritis, the latter being deaths of infants under one year of age; there were also registered at this age-period the deaths of 3 infants from enteritis, and the death of one infant from *gastro-enteritis*.

In the three preceding weeks deaths from whooping-cough were 3, 0, and one; deaths from enteric fever were 0, one, and 0; and deaths from diarrheal diseases were 5, 4, and 2 respectively.

There were 4 deaths from lobar-pneumonia, 5 from broncho-pneumonia, and 4 from *pneumonia* (not defined).

Tuberculous disease accounted for no less than 36 deaths as against 22, 15, and 29 deaths in each of the three weeks preceding. Of the 36 deaths, 27 were caused by tuberculous phthisis (*phthisis*), 2 by tuberculous meningitis, 2 by tuberculous peritonitis, and 5 deaths by other forms of the disease.

The deaths from malignant disease included 2 from carcinoma and 4 deaths from cancer (undefined).

Prematurity caused the deaths of 5 infants.

Diseases of the brain and nervous system were returned as the cause of death in 10 instances; this figure includes the deaths of 3 infants under one year of age from *convulsions*.

Seventeen deaths occurred from diseases of the heart and blood vessels, and there were 13 deaths from bronchitis.

There was one accidental death, and a death from laudanum poisoning was registered on the Coroner's certificate.

In six instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases comprise the deaths of 2 infants under one year of age and the deaths of 4 persons aged 60 years and upwards.

Thirty-five of the persons whose deaths were registered during the week were under 15 years of age (25 being infants under one year, of whom 11 were under one month old) and 35 were aged 60 years and upwards, including 15 persons aged 70 and upwards, of whom one was aged 82 years.

Seventy-five of the deaths registered during the week occurred in hospitals and other public institutions; of this number 10 took place in the North Dublin Union Workhouse and 24 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 18·6 per 1,000; the rate in the City was 19·4 (North City Districts, 18·3; South, 21·6) and in the Suburbs, 14·3.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 0·7 per 1,000 inhabitants, the rate for the City being 0·8 (17 in the North City Districts, and 0·0 in the South), and for the Suburbs, 0·0 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (13) are equal to an annual rate of 22·9 per 1,000 and include one death from infective enteritis, 2 deaths from *phthisis*, and 3 deaths from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (12) are equal to an annual rate of 15·8 per 1,000. There was one death from whooping-cough, there was one death from broncho-pneumonia, and there were 2 deaths from *pneumonia* (not defined); tuberculous phthisis and tuberculous meningitis each caused one death.

No. 2 North City District (Lisburn-street).—The deaths (10) are equivalent to an annual rate of 17·1 per 1,000. Broncho-pneumonia caused 2 deaths, *pneumonia* (not defined), one death, there were 3 deaths from phthisis and one accidental death.

No. 3 North City District (Benburb-street).—The deaths (16) represent an annual rate of 25·1 per 1,000. The deaths include one from enteric fever, 2 from infective enteritis, one from broncho-pneumonia, 2 from tuberculous phthisis and 2 from bronchitis.

Other North City Districts. The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants: Coolock and Drumecondra, part of, 9·1; and Finglas and Glasnevin, part of, 6·9. Of the 2 deaths recorded for Coolock and Drumecondra, part of, one was caused by broncho-pneumonia.

No. 1 South City District (South Earl-street).—The deaths (15) represent an annual rate of 19·1 per 1,000. Among the deaths were 5 from tuberculous disease, one from lobar-pneumonia, and 2 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (8) are equal to an annual rate of 19·4 per 1,000. Of the deaths 3 were caused by tuberculous disease and one by lobar-pneumonia.

No. 3 South City District (Peter-street).—The deaths (18) are equal to an annual rate of 22·0 per 1,000. Tuberculous phthisis caused 4 deaths, there was one death from lobar-pneumonia, and there were 2 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (14) are equivalent to an annual rate of 20·6 per 1,000. There were 7 deaths from tuberculous disease and one death from bronchitis.

New Kilmainham District. The deaths (7) are equal to an annual rate of 40·6 per 1,000. The total includes one death from tuberculous phthisis and one death from *pneumonia* (not defined.)

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 8·6; Pembroke, 22·0; Blackrock, 29·8; and Kingstown, 5·9. There was no death from any of the principal epidemic diseases tabulated for these districts. The 6 deaths from all causes for Rathmines and Rathgar included one death from *phthisis* and one death of a person who took an overdose of laudanum during a fit of temporary insanity. Of the 12 deaths from all causes for Pembroke, there were 3 deaths from tuberculous disease, one death from lobar-pneumonia and one death from bronchitis; and the 2 deaths recorded for Kingstown were caused by tuberculous phthisis (*phthisis*).

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1891," and the "Tuberculosis Prevention (Ireland) Act, 1903," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 30th October, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of choleraic diarrhoea as returned.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 30th October, 1909.

From this it appears that:—

Three cases of measles were admitted into hospital during the week, and 8 cases remained under treatment at its close.

Sixteen cases of scarlet fever were admitted to hospital, 15 were discharged, and 83* cases remained under treatment at the close of the week.

Seven cases of typhus remained under treatment in hospital at the close of the week.

Eleven cases of diphtheria were admitted to hospital, 8 were discharged, and 44 patients remained under treatment at the close of the week.

Seven cases of enteric fever were admitted to hospital during the week, 10 were discharged and 55 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 6 cases of pneumonia were admitted to hospital, were discharged, there were 4 deaths, and 19 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 11.9) was equal to an average annual death-rate of 12.0 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12.9 per 1,000, the rate for Glasgow being 13.1 and for Edinburgh 12.0.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 30th October. From his Report it appears that of a total of 63 cases notified, 38 were scarlet fever, 14 phthisis, 5 diphtheria, 1 erysipelas, and one cerebro-spinal fever. Among the 443 cases of infectious diseases in hospital at the close of the week were 263 cases of scarlet fever, 66 of measles, 39 of phthisis, 34 of diphtheria, 14 of erysipelas, 13 of whooping-cough, 10 of enteric fever, and 2 of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 30th October, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 30th October, 1909:—

"The outstanding feature of this week's weather is the rainstorm which visited the S. and S.E. of England between Tuesday and Friday, at a time when dry, cold weather was experienced over the N.W. of that country as well as in Ireland and Scotland. Even in London the rainfall of the 72 hours ended at 7 a.m. of Friday was 1.96 inches while Dover received 4.36 inches in the same time, and Brighton 4.55 inches up to 6 p.m. of Thursday. In Ireland the mild weather which had prevailed during the month of October up to Saturday, the 23rd, gave way to a cold snap which lasted through the week, and which daily gained strength. The low temperature was most marked in the inland counties—for example, the minimal readings of the screened thermometer reported from Birr Castle, King's County, were 41°, 37°, 39°, 32°, 26°, 24° and 25° respectively. During the first two days of the week a deep atmospheric depression, which had travelled quickly across Ireland and the lowlands of Scotland on Saturday, the 23rd, was centred off or over the S.W. of Norway. Its N.W. wind blew freshly over nearly all parts of the British Isles, cold showers of rain and hail falling in many places and thunder or lightning occurring at some stations. At 4 p.m. of Monday iridescent clouds were seen from Dublin; in the evening a lunar halo appeared in a thin sheet of cirro-stratus cloud, and the wind fell calm. These signs were the prelude of a new and deep baric depression which reached the mouths of St. George's and the English Channels on Tuesday morning. Fresh to strong easterly gales sprang up, being especially severe on the east coast of Ireland. The accompanying precipitation was, however, slight on this exposed coast. It was far otherwise on the shores of the English Channel, where rain fell in torrents during Tuesday and the two following days, the disturbance first travelling south-eastwards to the mouth of the Loire and thence north-eastwards to the Netherlands. A small shallow secondary depression passed eastwards across Ireland on Saturday, causing some cold showers and hail in places. In Dublin the mean height of the barometer was 29.84 inches, the range being from 29.501 inches at 9 a.m. of Tuesday (wind, E.) and 30.078 inches at 9 p.m. of Saturday (wind, W.). The corrected mean temperature was 41.8°, or 11° lower than that of the previous week. The mean dry bulb reading at 9 a.m. and 9 p.m. was 40.7°. On Monday the screened thermometers rose to 49.5°, on Saturday they fell to 30.0°. The grass minimum was 24.0° on Saturday. E. and W.N.W. were the dominant winds. The rainfall was .104 inch on 4 days, .043 inch being measured on Monday. Sheet lightning was seen on Friday evening."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.695 inches. The highest reading (29.917) was on Saturday at 9 p.m., air calm, and the lowest (29.335) on Tuesday at 9 a.m., wind E.N.E.

The mean temperature for the week was 40.3°, being 6.8° below the average for the corresponding period of the 10 years 1899–1908. The temperature was highest on Monday, on which day the thermometer registered 51.4°, and was lowest on Friday, the mercury having fallen to 25.9°. The mean of the Dry Bulb for the week was 39.3° and of the Wet Bulb 37.0°. The mean humidity of the air was .81, complete saturation being represented by 1.0. The rainfall during the week measured 0.134 inch.

At Greenwich the mean temperature for the week was 41.9°, the maximum 55.1°, and the minimum 28.2°; at Glasgow the maximum was 50.2°, the minimum 23.0°, and the mean 37.7°; and at Edinburgh the maximum was 47.2°, the minimum 30.1°, and the mean 38.1°. The rainfall at Greenwich measured 1.87 ins.; at Glasgow, 0.01 in.; and at Edinburgh, 0.05 in.

The information in the preceding paragraph has been kindly furnished by the Registrar-General of England and Wales and of Scotland.

TABLE XIII.—METEOROLOGICAL OBSERVATIONS taken at the ORDNANCE SURVEY OFFICE PHOENIX PARK, DUBLIN. (Height above mean sea level 155.3 feet.)

VOL. XLVI.]

WEEK ENDING SATURDAY, 6TH NOVEMBER, 1909.

[No. 44.]

*General Register Office, Charlemont House,
Dublin, 8th November, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 17·4 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in sixteen of the districts to 14·4 in Sligo, the 7 deaths from all causes for that district, including 3 from diarrhoeal diseases. Among the 116 deaths from all causes for Belfast are 4 from whooping-cough, and 4 from diarrhoeal diseases. Of the 33 deaths from all causes for Cork 2 are from enteric fever and 2 from diarrhoeal diseases, and included in the 10 deaths from all causes for Drogheda is one from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 220—119 boys and 101 girls—and the deaths to 145—85 males and 60 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 19.0 in every 1,000 of the population; omitting the deaths (numbering 3) of persons admitted into public institutions from localities outside the Area, the rate was 18.6 per 1,000. During the forty-four weeks ending with Saturday last, the death-rate averaged 21.8, and was 2.7 below the mean rate for the corresponding portions of the ten years 1899-1908.

Among the 145 deaths registered are one death from whooping-cough, one from enteric fever, and 2 deaths from diarrhoeal diseases; the deaths of 7 infants under one year of age from enteritis were also registered. Influenza caused one death.

In the three preceding weeks, deaths from whooping-cough were 0, one, and one; deaths from enteric fever were one, 0, and one; deaths from diarrhoeal diseases were 4, 2, and 3 and deaths from influenza were 3, 0, and 0, respectively.

There were 2 deaths from broncho-pneumonia, and 6 deaths from *pneumonia* (not defined). Tuberculous disease caused 26 deaths, including 19 from tuberculous phthisis (*phthisis*), 2 from tuberculous meningitis, and 4 from other forms of tuberculous disease. In the three preceding weeks, deaths from all forms of the disease numbered 15, 29, and 36, respectively.

Five deaths were caused by carcinoma, and 5 by cancer, malignant disease (undefined).

The deaths of 2 infants, prematurely born, were registered.

There were 11 deaths from diseases of the brain and nervous system; these include the deaths of 2 infants under one year of age from *convulsions*.

Diseases of the heart and blood vessels caused the deaths of 19 persons, and the deaths of 13 persons were caused by bronchitis.

The 2 accidental deaths were attributed to burns.

There was one death caused by hæmorrhage from wound in the throat suicidally inflicted with a razor.

In four instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 2 infants under one year of age and the deaths of 2 persons aged 60 years and upwards.

Forty of the persons whose deaths were registered during the week were under 4 years of age (27 being infants under one year, of whom 11 were under one month old) and 4 were aged 60 years and upwards, including 20 persons aged 70 and upwards, of whom 8 were octogenarians.

Fifty of the deaths registered during the week occurred in hospitals and other public institutions; of this number 10 took place in the North Dublin Union Workhouse and 12 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 18.6 per 1,000; the rate in the City was 20.9 (North City Districts, 20.9; South, 20.2) and in the Suburbs, 12.0.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 0.5 per 1,000 inhabitants, the rate for the City being 0.5 (0.3 in the North City Districts, and 0.7 in the South), and for the Suburbs, 0.6 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (15) are equal to an annual rate of 26.4 per 1,000, one death from influenza, 2 deaths from *phthisis*, and 3 deaths from bronchitis were recorded.

No. 1 North City District, West (Summer-hill).—The deaths (18) are equal to an annual rate of 23.7 per 1,000, and include 5 deaths from tuberculous disease, and one death accidentally caused by burns.

No. 2 North City District (Lisburn-street).—The deaths (16) are equivalent to an annual rate of 27.4 per 1,000. Among them are one death from broncho-pneumonia, 4 deaths from tuberculous disease, 3 deaths from bronchitis, and one death by suicide.

No. 3 North City District (Bonhurb-street).—The deaths (6) represent an annual rate of 9.4 per 1,000. There was one death from *phthisis*.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19.6 per 1,000 inhabitants; Coolock and Drumcondra, part of, 22.7; and Finglas and Glasnevin part of, 6.9. Of the 2 deaths recorded for Clontarf and Howth, No. 1, part of, one was from epidemic diarrhoea and one was from *phthisis*; and the 5 deaths from all causes for Coolock and Drumcondra, part of, include one death from tuberculous *phthisis* and one from tuberculous meningitis.

No. 1 South City District (South Earl-street).—The deaths (14) represent an annual rate of 17.8 per 1,000. One death was caused by diarrhoea; broncho-pneumonia and tuberculous *phthisis* each caused one death, and there was one accidental death by burns.

No. 2 South City District (Castle-street).—The deaths (10) are equal to an annual rate of 24.2 per 1,000. *Pneumonia* (not defined) caused one death, tuberculous *phthisis* caused 2 deaths and bronchitis 3 deaths.

No. 3 South City District (Peter-street).—The deaths (18) are equal to an annual rate of 22.0 per 1,000. There were 3 deaths from *pneumonia* (not defined), 3 deaths from tuberculous disease, and 2 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (15) are equivalent to an annual rate of 22.0 per 1,000 and include one death from *pneumonia* (not defined), 2 deaths from tuberculous *phthisis* (*phthisis*), and 2 deaths from diseases of the respiratory system.

New Kilmainham District.—The only death recorded, equivalent to an annual rate of 5.8 per 1,000, was one from whooping-cough.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 12.8; Pembroke, 12.8; Blackrock, 17.9; and Kingstown, 5.9. The only death from any of the principal epidemic diseases tabulated for these districts was one from enteric fever for Rathmines and Rathgar. Of the 9 deaths from all causes for this district one is from *pneumonia*; the 7 deaths from all causes for Pembroke include one death from tuberculous *phthisis* and one from bronchitis; one of the 3 deaths from all causes for Blackrock is from tuberculous *phthisis*; and of the 2 deaths recorded for Kingstown one is from tuberculous *phthisis*.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," and the "Tuberculosis Prevention (Ireland) Act, 1908," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 6th November, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of choleraic diarrhoea as returned.

(b) From 2nd November.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 6th November, 1909, and the number under treatment at the close of each of the 3 preceding weeks.

From this it appears that:—

One case of measles was admitted into hospital during the week, one was discharged, and 8 cases remained under treatment at its close.

Twenty-six cases of scarlet fever were admitted to hospital, 9 were discharged, and 100* cases remained under treatment at the close of the week. At the close of the 3 preceding weeks the number of cases in hospital was 84, 82, and 83 respectively.

One case of typhus was admitted into hospital during the week, 3 were discharged, and 4 cases remained under treatment at the close of the week.

Fourteen cases of diphtheria were admitted to hospital, 9 were discharged, and 49 patients remained under treatment at the close of the week.

Ten cases of enteric fever were admitted to hospital during the week, 7 were discharged, there were 2 deaths, and 56 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 15 cases of pneumonia were admitted to hospital, 10 were discharged, there were 3 deaths, and 28 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 13·4) was equal to an average annual death-rate of 13·3 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 15·3 per 1,000, the rate for Glasgow being 18·2 and for Edinburgh 12·5.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 6th November. From his Report it appears that of a total of 86 cases notified, 59 were scarlet fever, 12 phthisis, 9 diphtheria, and 6 erysipelas. Among the 453 cases of infectious diseases in hospital at the close of the week were 275 cases of scarlet fever, 61 of measles, 40 of phthisis, 36 of diphtheria, 15 of whooping-cough, 11 of erysipelas, 9 of enteric fever, and one of chicken-pox.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 6th November, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 6th November, 1909:—

"Quiet, uneventful weather held during this week. The period began and ended with seasonable cold, but Tuesday and the three following days were extremely mild. Until Monday evening temperature was low in Dublin, owing to a calm state of the atmosphere within an anticyclonic system which stretched eastwards across the British Islands from the Atlantic. In Central Ireland, the screened thermometer fell to 24° at Birr Castle in the course of Sunday night. On Tuesday morning a depression, noticed the previous day in the neighbourhood of the Faerö Islands, had spread sufficiently southwards to induce a light southwesterly current of warm, damp air to pass over the British Isles. In the course of the day named the thermometer rose at many stations to 55°, 56° or 57°. Jersey reporting 58°. Wednesday was even warmer owing to a prevalence of sunshine—especially in Ireland, so that 60° was reached at Donaghadee and 61° at Roche's Point, Cork Harbour. Thursday was a calm, mild, dull day. On Friday a shallow depression, central near the Faerö Islands, brought a moderate rainfall to the Irish and Welsh stations, and this was followed by a brisk decrease of temperature, Saturday proving a fair, bright winter's day. In Dublin the mean height of the barometer was 30.136 inches, pressure rising to 30.304 inches at 9 p.m. of Sunday (wind calm) and falling to 29.976 inches at 4 p.m. of Friday (wind, W.). The corrected mean temperature was 46.8°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 45.4°. The screened thermometers fell to 30.0° on Monday (when the grass minimum was 24.9°) and rose to 56.8° on Wednesday. Light westerly winds prevailed. Rain fell on 3 days, the measurement being .068 inch, of which .032 inch was recorded on Monday. A solar halo was seen on that day."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29·977 inches. The highest reading (30·147) was on Sunday at 9 p.m., air calm, and the lowest (29·830) on Friday at 9 a.m., wind S.W.

The mean temperature for the week was 45·0°, being 2·6° below the average for the corresponding period of the 10 years 1899–1908. The temperature was highest on Wednesday, on which day the thermometer registered 58·6°, and was lowest on Monday, the mercury having fallen to 23·9°. The mean of the Dry Bulb for the week was 44·0° and of the Wet Bulb 42·4°. The mean humidity of the air was ·88, complete saturation being represented by 1·0. The rainfall during the week measured 0·117 inch.

At Greenwich the mean temperature for the week was 47·1°, the maximum 56·7°, and the minimum 34·2°; at Glasgow the maximum was 59·0°, the minimum 22·5°, and the mean 45·0°; and at Edinburgh the maximum was 56·2°, the minimum 28·9°, and the mean 45·5°. The rainfall at Greenwich measured 0·15 in.; at Glasgow, 0·03 in.; and at Edinburgh, 0·06 in.

The information in the preceding paragraph has been kindly furnished by the Registrar General of England and Wales and of Scotland.

[VOL. XLVI.]

WEEK ENDING SATURDAY, 13TH NOVEMBER, 1909.

[No. 45.]

*General Register Office, Charlemont House,
Dublin, 15th November, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 19·2 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past our weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 14·0 | 14·0 | 9·3 | 23·3 | 15·2 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 0·9 per 1,000, the rates varying from 0·0 in seventeen of the districts to 5·7 in Newtownards, the 5 deaths from all causes for that district, including one from diarrhoea. Among the 130 deaths from all causes for Belfast are 4 from whooping-cough, one from diphtheria, 2 from enteric fever, and 2 from diarrhoeal diseases.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 215—113 boys and 102 girls—and the deaths to 177—87 males and 90 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 23·2 in every 1,000 of the population; omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, the rate was 21·7 per 1,000. During the forty-five weeks ending with Saturday last, the death-rate averaged 21·9, and was 2·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

The total deaths, amounting to 177, include one death from each of the following diseases:—Scarlet fever, whooping-cough, diphtheria, and enteric fever; and 4 deaths from diarrhoeal diseases of infants under 5 years of age (there were also registered at this age-period the deaths of 4 children from enteritis and 2 from gastro-enteritis). Influenza caused 2 deaths and cerebro-spinal meningitis one death.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

In each of the three preceding weeks, deaths from scarlet fever were one, 0 and 0; deaths from whooping-cough were one, one, and one; deaths from diphtheria were 0, 0, and 0; deaths from enteric fever were 0, one, and one; deaths from diarrhoeal diseases were 2, 3 and 2; deaths from influenza were 0, 0, and one; and deaths from cerebro-spinal fever were 0, 0, and 0.

Of 14 deaths from pneumonia (all forms), 3 were attributed to lobar pneumonia, 5 to broncho-pneumonia, and 6 to *pneumonia* (not defined).

Twenty-eight deaths were caused by tuberculous disease (all forms); the total includes 20 deaths from tuberculous phthisis (*phthisis*), 4 deaths from tuberculous meningitis, and 4 deaths from other forms of the disease; in the three preceding weeks, deaths from all forms of tuberculous disease numbered 29, 36, and 26, respectively.

There were 4 deaths from carcinoma, one death from sarcoma, and 3 from cancer, malignant disease (undefined).

The deaths of 6 infants, prematurely born, were registered.

Diseases of the brain and nervous system caused 13 deaths; this figure includes the deaths of 3 infants under one year of age and one infant aged one year from *convulsions*.

Amongst the deaths from other causes were 33 from diseases of the heart and blood vessels and 22 deaths from diseases of the respiratory system.

Of 4 deaths assigned to accidental causes, one was caused by a dray and one was by drowning.

In five instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases comprise the deaths of 3 children under 5 years of age (including 2 infants under one year old) and the deaths of 2 persons aged 60 years and upwards.

Forty-five of the persons whose deaths were registered during the week were under 5 years of age (32 being infants under one year, of whom 8 were under one month old) and 56 were aged 60 years and upwards, including 26 persons aged 70 and upwards, of whom 5 were octogenarians, and 2 (a man and a woman) were stated to have been aged 90 and 92 years respectively.

Eighty-one of the deaths registered during the week occurred in hospitals and other public institutions; of this number 7 took place in the North Dublin Union Workhouse, 22 in the South Dublin Union Workhouse, and 2 in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 21·7 per 1,000; the rate in the City was 22·3 (North City Districts, 21·9; South, 22·6) and in the Suburbs, 20·0.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·0 per 1,000 inhabitants, the rate for the City being 1·0 (1·3 in the North City Districts, and 0·7 in the South), and for the Suburbs, 1·1 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (10) are equal to an annual rate of 17·6 per 1,000. Whooping-cough and diphtheria each caused one death, there was one death from lobar-pneumonia, also one death from broncho-pneumonia and there were 2 deaths from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (19) are equal to an annual rate of 25·1 per 1,000. The deaths included one from epidemic enteritis, one from *pneumonia* (not defined), 2 deaths from tuberculous disease, and 3 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (16) are equivalent to an annual rate of 27·4 per 1,000. There was one death from enteric fever; broncho-pneumonia and *pneumonia* (not defined) each caused one death, there were 4 deaths from tuberculous disease, and 3 deaths from diseases of the respiratory system.

No. 3 North City District (Benburb-street).—The deaths (17) represent an annual rate of 26·7 per 1,000. Tuberculous disease caused 3 deaths, bronchitis 3 deaths, and there was one accidental death.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumcondra, part of, 9·1 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 13·7. Of the 2 deaths recorded for Coolock and Drumcondra, part of, one was caused by broncho-pneumonia and one by *pneumonia* (not defined); and of the 2 deaths for Finglas and Glasnevin, part of, there was one from *phthisis*.

No. 1 South City District (South Earl-street).—The deaths (25) represent an annual rate of 31·8 per 1,000, and include one death from each of broncho-pneumonia and *pneumonia* (not defined), 7 deaths from tuberculous disease, and one death from bronchitis.

No. 2 South City District (Castle-street).—The deaths (12) are equal to an annual rate of 29·1 per 1,000. There was one death from influenza, one death from each of broncho-pneumonia and *pneumonia* (not defined), there were 4 deaths from tuberculous disease, and 3 deaths from diseases of the respiratory system.

No. 3 South City District (Peter-street).—The deaths (11) are equal to an annual rate of 13·4 per 1,000. Among the deaths was one from epidemic enteritis, also one death from influenza, one death from lobar-pneumonia, one death from tuberculous disease, and one death from bronchitis were recorded.

No. 4 South City District (Grand Canal-street).—The deaths (13) are equivalent to an annual rate of 19·1 per 1,000. Of the deaths one was from epidemic enteritis, one each from lobar-pneumonia and *pneumonia* (not defined), 3 deaths were from tuberculous disease, and 2 from bronchitis.

New Kilmainham District.—The deaths (4) are equal to an annual rate of 23·2 per 1,000. The deaths include one from tuberculous phthisis, and 2 deaths from bronchitis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 8·6; Pembroke, 29·3; Blackrock, 47·6; and Kingstown, 11·8. The deaths from the principal epidemic diseases tabulated for these districts include one from *diarrhea* for Rathmines and Rathgar, and one from scarlet fever for Pembroke. Among the 16 deaths from all causes for the last-named district are one from *cerebro-spinal meningitis*, 2 from tuberculous phthisis (*phthisis*), 2 from bronchitis, and 2 accidental deaths.

* See Columns 10-13 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," and the "Tuberculosis Prevention (Ireland) Act, 1908," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 13th November, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of choleraic diarrhoea as returned.

(b) From 2nd November.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 13th November, 1909, and the number under treatment at the close of each of the 3 preceding weeks:

From this it appears that:—

Two cases of measles were discharged from hospital during the week, and 6 cases remained under treatment at its close.

Eight cases of scarlet fever were admitted to hospital, 14 were discharged, there was one death, and 93* cases remained under treatment at the close of the week. At the close of the 3 preceding weeks the number of cases in hospital was 82, 83, and 100 respectively.

Five cases of typhus remained under treatment in hospital at the close of the week. Twenty cases of diphtheria were admitted to hospital, 10 were discharged, there were 2 deaths, and 57 patients remained under treatment at the close of the week. The number of cases in hospital at the close of the 3 preceding weeks was 41, 44 and 49, respectively.

Ten cases of enteric fever were admitted to hospital during the week, 9 were discharged, and 57 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 18 cases of pneumonia were admitted to hospital, 5 were discharged, there was one death, and 40 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 13·9) was equal to an average annual death-rate of 13·8 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 15·8 per 1,000, the rate for Glasgow being 18·0 and for Edinburgh 13·9.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 13th November. From this Report it appears that of a total of 60 cases notified, 25 were scarlet fever, 19 phthisis, 9 diphtheria, and 7 erysipelas. Among the 452 cases of infectious diseases in hospital at the close of the week were 265 cases of scarlet fever, 70 of measles, 43 of phthisis, 36 of diphtheria, 13 of whooping-cough, 9 of erysipelas, 7 of enteric fever one of cerebro-spinal fever, and one of chicken-pox.

* See note (a) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 13th November, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 13th November, 1909:—

"Generally favourable weather prevailed in both England and Ireland, but in Scotland conditions were less settled and a heavy rainfall occurred on Thursday and Friday at a time when a warm, humid westerly wind was sweeping over the other divisions of the Kingdom. In the far north atmospheric pressure was low and very unstable, a succession of cyclonic depressions travelling from Iceland eastwards to Scandinavia. Over Ireland, the south of England, and France, on the contrary, an anticyclonic distribution of air-pressure prevailed for the most part. On Monday morning the barometer stood as high as 30.13 inches at Valentia, in Kerry, and on Thursday morning 30.40 inches was touched at the same station. Within the relatively calm limits of the anticyclone low night temperatures were recorded at inland stations—at Birr Castle, the minimum early on Sunday was 25°; in the following night it was 23°—a figure which was reached at Bath in the course of Monday night. On Tuesday a strong S.W. wind blew across Ireland and Scotland, so that the thermometer rose to 55° at Aberdeen and to 53° in Dublin. At 8 a.m. of that day the reading at Birr Castle was 46°, or 21° higher than that recorded 24 hours previously. The warm wave passed away quickly. Wednesday proving cool and bright in Ireland, while hail-showers fell on the Lancashire coast. Faint flashes of sheet lightning were seen from Dublin to the eastward on the evening of that day. Temperature rose again on Thursday, and cloudy skies and strong and squally S.W. and W. winds prevailed on Friday. Saturday was fair and cool at first, cloudy to overcast in the afternoon, calm with smoke fog in Dublin during the evening. In this city the mean height of the barometer was 30.107 inches, the range of pressure being from 30.108 inches at 9 a.m. of Monday (wind, W.N.W.) to 29.643 inches at 9 p.m. of Friday (wind, W.). The mean temperature was 43.7°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 41.9°. The screened thermometers fell to 30.0° on Monday and rose next day to 53.0°. The prevalent wind was W.N.W. Rain fell on 3 days—the amount of .697 inch, of which .464 inch was recorded on Saturday. Nearly the whole of this large quantity fell after midnight in the early morning hours of the 14th."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.803 inches. The highest reading (30.256) was on Monday at 9 a.m., air calm, and the lowest (29.499) on Friday at 9 p.m., wind W.

The mean temperature for the week was 41.9°, being 3.9° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Tuesday, on which day the thermometer registered 50.9°, and was lowest on Monday, the mercury having fallen to 25.4°. The mean of the Dry Bulb for the week was 40.2° and of the Wet Bulb 38.6°. The mean humidity of the air was .88, complete saturation being represented by 1.0. The rainfall during the week measured 0.733 inch.

At Greenwich the mean temperature for the week was 42.3°, the maximum 53.8°, and the minimum 29.1°; at Glasgow the maximum was 52.8°, the minimum 32.2°, and the mean 44.0°; and at Edinburgh the maximum was 50.8°, the minimum 27.8°, and the mean 41.2°. The rainfall at Greenwich measured 0.03 in.; at Glasgow, 0.38 in.; and at Edinburgh, 0.02 in.

The information in the preceding paragraph has been kindly furnished by the Registrar-General of England and Wales and of Scotland.

WEEK ENDING SATURDAY, 20TH NOVEMBER, 1909.

[No. 46.]

*General Register Office, Charlemont House,
Dublin, 22nd November, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban districts of Ireland was 20·0 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Dublin Reg. Area, | 160 | 279 | 120 | 120 | 170 | Tralee, | 211 | 106 | 264 | 53 | 159 |
| Dundalk, | 39 | 39 | 155 | 39 | 68 | Waterford, | 117 | 78 | 214 | 117 | 132 |
| Enniskerry, | 49 | 246 | 98 | 295 | 172 | Wexford, | 140 | 93 | 233 | 327 | 198 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 0·8 per 1,000, the rates varying from 0·0 in seven of the districts to 5·7 in Newtownards, one of the 2 deaths for that district being from diphtheria. Among the 134 deaths from all causes for Belfast are one from scarlet fever, one from whooping-cough, and 2 from diarrhoeal diseases, and of the 32 deaths from all causes for Cork one is from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 238—114 boys and 109 girls—and the deaths to 190—94 males and 96 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 24·9 in every 1,000 of the population; omitting the deaths (numbering 10) of persons admitted into public institutions in localities outside the Area, the rate was 23·6 per 1,000. During the forty-six weeks ending with Saturday last, the death-rate averaged 21·9, and was 2·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

The total deaths (190) registered included 2 deaths from whooping-cough, 2 deaths from diphtheria, and 2 deaths from diarrhoeal diseases (there were also registered 3 deaths from enteritis and one from *gastro-enteritis* of infants under one year of age); there was one death from influenza. In each of the three weeks preceding, deaths from whooping-cough were one, one, and one; deaths from diphtheria were 0, 0, and one; deaths from diarrhoeal diseases were 3, 2, and 4, and deaths from influenza were 0, one, and 2.

There were 2 deaths from lobar pneumonia, 9 from broncho-pneumonia, and 7 from pneumonia (not defined).

Of 26 deaths from tuberculous disease (all forms), 20 were from tuberculous phthisis (*phthisis*), 2 from tuberculous meningitis, one from each of tuberculous peritonitis and *tales mesenterica*, and 2 from other forms of the disease; in each of the three preceding weeks deaths from tuberculous disease were 36, 26, and 28.

Malignant disease was the cause of 17 deaths, including 6 from carcinoma, 2 from sarcoma and 9 from cancer (undefined).

The deaths of 4 prematurely born infants were registered.

The deaths (in number 13) from diseases of the brain and nervous system include the death of 4 children under 5 years of age (of whom 2 were under one year) from *convulsions*.

Diseases of the heart and blood vessels accounted for 32 deaths, and of 22 deaths from diseases of the respiratory system, 21 were attributed to bronchitis.

Six deaths were attributed to accident or negligence, including one death in building operations, one by burns, 2 by drowning, one by poisoning by carbolic acid, and one death of an infant by neglect at birth.

In four instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases comprise the death of one infant under one year of age and the deaths of 3 persons aged 60 years and upwards.

Forty-one of the persons whose deaths were registered during the week were under years of age (30 being infants under one year, of whom 7 were under one month old) and were aged 60 years and upwards, including 29 persons aged 70 and upwards, of whom were octogenarians, and one (a male) was stated to have been aged 91 years.

Eighty-six of the deaths registered during the week occurred in hospitals and other public institutions; of this number 17 took place in the North Dublin Union Workhouse, 19 in the South Dublin Union Workhouse, and one in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week: deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 23·6 per 1,000; the rate in the City was: (North City Districts, 26·2; South, 25·4) and in the Suburbs, 16·0.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 0·8 per 1,000 inhabitants, the rate for the City being 1·0 (1·3 in the North City Districts, and 0·7 in the South), and for the Suburbs, 0·0 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (26) are equal to an annual rate of 45·8 per 1,000. Whooping-cough, epidemic enteritis, and influenza each caused one death, there were 2 deaths from broncho-pneumonia, also 2 deaths from pneumonia (not defined), tuberculous disease caused 5 deaths, bronchitis one death, and there was one death by drowning.

No. 1 North City District, West (Summer-hill).—The deaths (16) are equal to an annual rate of 21·1 per 1,000. There was one death from diphtheria, there were 2 deaths from broncho-pneumonia, one death from pneumonia (not defined), 2 deaths from tuberculous disease, 2 deaths from bronchitis, and one death by burns.

No. 2 North City District (Lisburn-street).—The deaths (21) are equivalent to an annual rate of 36·0 per 1,000. Broncho-pneumonia and pneumonia (not defined) each caused one death, there were 5 deaths from tuberculous disease and one accidental death.

No. 3 North City District (Benburb-street).—The deaths (10) represent an annual rate of 15·7 per 1,000. The deaths included one from each of broncho-pneumonia, pneumonia (not defined), and phthisis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants; Coolock and Drumcondra, part of, 13·6; and Finglas and Glasnevin, part of, 13·7. The only death recorded for Clontarf and Howth, No. 1, part of, was one from tuberculous phthisis; the 3 deaths from all causes for Coolock and Drumcondra, part of, one was from diarrhoea; and of the 2 deaths recorded for Finglas and Glasnevin, part of, one was caused by pneumonia (not defined), and one by neglect at birth.

No. 1 South City District (South Earl-street).—The deaths (17) represent an annual rate of 21·6 per 1,000, and include the deaths of 5 persons from bronchitis.

No. 2 South City District (Castle-street).—The deaths (12) are equal to an annual rate of 29·1 per 1,000. Of these, one was from broncho-pneumonia, 1 from tuberculous disease, and 2 were caused by bronchitis.

No. 3 South City District (Peter-street).—The deaths (26) are equal to an annual rate of 31·7 per 1,000. Tuberculous phthisis caused 5 deaths, and 5 deaths were due to bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (18) are equivalent to an annual rate of 26·4 per 1,000. Whooping-cough and diphtheria each caused one death; there were 2 deaths from lobar pneumonia, one death from phthisis, 4 deaths from diseases of the respiratory system, and one death by drowning.

New Kilmainham District.—There were no deaths recorded for this district during the week.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 18·5; Pembroke, 16·5; Blackrock, 23·8; and Kingstown, 5·9. There were no deaths from any of the principal epidemic diseases tabulated for these districts. Among the 13 deaths from all causes for Rathmines and Rathgar were 2 from tuberculous disease and 2 from bronchitis; of the 9 deaths from all causes for Pembroke one was caused by broncho-pneumonia and one by bronchitis; the 4 deaths from all causes for Blackrock included one death from accident and poisoning; and of the 2 deaths recorded for Kingstown there was one death from broncho-pneumonia.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," and the "Tuberculosis Prevention (Ireland) Act, 1908," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 20th November, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of choleraic diarrhoea, as returned.

(b) Not including 2 cases of choleraic diarrhoea, as returned.

(c) From 2nd November.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 20th November, 1909, and the number under treatment at the close of each of the 3 preceding weeks.

From this it appears that:—

One case of measles was admitted to hospital, 4 were discharged, and 3 cases remained under treatment at the close of the week.

Seventeen cases of scarlet fever were admitted to hospital, 15 were discharged, there was one death, and 94* cases remained under treatment at the close of the week. At the close of the 3 preceding weeks the number of cases in hospital was 83, 100, and 93 respectively.

One case of typhus was admitted to hospital during the week, one was discharged, and five cases remained under treatment in hospital at the close of the week.

Twelve cases of diphtheria were admitted to hospital, 24 were discharged, and 45 patients remained under treatment at the close of the week. The number of cases in hospital at the close of the 3 preceding weeks was 44, 49, and 57 respectively.

Eight cases of enteric fever were admitted to hospital during the week, 12 were discharged, and 53 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 12 cases of pneumonia were admitted to hospital 13 were discharged, and 39 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 14·7) was equal to an average annual death-rate of 14·6 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 19·8 per 1,000, the rate for Glasgow being 24·9 and for Edinburgh 14·8.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 20th November. From this Report it appears that of a total of 92 cases notified, 55 were scarlet fever, 15 phthisis, 14 diphtheria, 7 erysipelas, and one cerebro-spinal fever. Among the 482 cases of infectious diseases in hospital at the close of the week were 277 cases of scarlet fever, 83 of measles, 41 of phthisis, 38 of diphtheria, 16 of whooping-cough, 12 of erysipelas, 5 of enteric fever, 4 of chicken-pox and one of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the week ending Saturday, 20th November, 1909, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature and Rainfall** for the week, and for each of the two Weeks immediately preceding.

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1909. (b) Formerly described as "Simple Continued Fever." (c) Exclusive of Pneumonia. (d) Exclusive of 10 deaths of persons (including one under 1 year old and 4 at 40 years or upwards), admitted to hospital from localities outside the Area. (e) It having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Drogheda, Ballymena, and Siligo, are those of Drogheda, Ballymena, and Siligo respectively. (f) The readings at Drogheda, Ballymena, and Siligo are those of Drogheda, Ballymena, and Siligo respectively.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 20th November, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 20th November, 1909:—

"The weather of this week was in general of a wintry character, and particularly sharp frosts for the time of year were experienced in Scotland and over Central Ireland on several nights. In England, on the contrary, no exceptional cold was felt. The period opened with a shallow atmospheric depression lying off the S.E. of Ireland, over St. George's Channel, South Wales, and the Bristol Channel. This system caused a heavy downpour of cold rain, sleet or snow, and hail in Dublin and at Birr Castle, King's Co. Sunday's dawn found the Dublin and Wicklow Mountains deeply covered with snow. The disturbance travelled south-eastwards to France and finally to Italy and the Mediterranean. A shallow "Secondary" brought a heavy fall of snow and hail to the Counties of Dublin and Wicklow early on Monday morning, snow lying to a depth of some 2 inches even in the City of Dublin and throughout that day. Inland very little snow fell, but the thermometer fell to 18° in the screen at Birr Castle. An anticyclone now formed over the northern half of the British Isles, and within its central area very keen frost occurred in Scotland and Ireland. Early on Tuesday the thermometer sank to 16° at Birr Castle, 17° at Nairn, 18° at Wick, and 20° at Aberdeen. On Wednesday the minima in Scotland were still lower, namely, 12° at Wick, 14° at Nairn and Aberdeen. At this time, a freshening easterly wind and increasing cloud caused a decided rise of temperature on the east coast of Ireland, and this milder weather lasted till early on Saturday, when a clearing sky and shift of wind to W. brought the thermometer down many degrees. A heavy snowstorm visited Berlin on Wednesday, but in general the weather was milder on the Continent than in Ireland and Scotland. In Dublin the mean height of the barometer was 30.096 inches, pressure ranging from 29.617 inches at 9 a.m. of Sunday (wind, N.E.) to 30.301 inches at 9 a.m. of Saturday (wind, W.). The mean temperature was 40.0°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 39.4°. The screened thermometers fell to 28.2° on Tuesday and rose to 47.2° on Friday. Polar winds between N.W. and E. prevailed. The rainfall was .188 inch on 3 days, .149 inch being measured on Sunday as the product of melted snow and hail."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.933 inches. The highest reading (30.137) was on Friday at 9 p.m., wind N.N.E., and the lowest (29.451) on Sunday at 9 a.m., wind N.N.E.

The mean temperature for the week was 37.7°, being 6.0° below the average for the corresponding period of the 10 years 1899–1908. The temperature was highest on Saturday, on which day the thermometer registered 47.7°, and was lowest on Tuesday, the mercury having fallen to 20.9°. The mean of the Dry Bulb for the week was 37.3° and of the Wet Bulb 35.0°. The mean humidity of the air was .80, complete saturation being represented by 1.0. The rainfall during the week measured 0.037 inch.

At Greenwich the mean temperature for the week was 38.7°, the maximum 48.0°, and the minimum 30.1°; at Glasgow the maximum was 45.5°, the minimum 23.0°, and the mean 30.7°; and at Edinburgh the maximum was 43.8°, the minimum 24.1°, and the mean 32.3°. The rainfall at Greenwich measured 0.28 in., and at Edinburgh 0.01 in. There was no rainfall recorded at Glasgow.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 27TH NOVEMBER, 1909.

[No. 47.]

*General Register Office, Charlemont House,
Dublin, 29th November, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 21·0 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 93 | 233 | 327 | 140 | 198 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in sixteen of the districts to 5·7 in Newtownards, the 5 deaths from all causes for that district including one from whooping-cough. Among the 167 deaths from all causes for Belfast are 7 from whooping-cough, and one from diarrhoea, and included in the 38 deaths from all causes for Cork are one from scarlet fever, and one from enteric fever.

DUBLIN REGISTRATION AREA.

* In the Dublin Registration Area the births registered during the week amounted to 196—110 boys and 86 girls—and the deaths to 172—82 males and 90 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 22·5 in every 1,000 of the population ; omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, the rate was 20·7 per 1,000. During the forty-seven weeks ending with Saturday last, the death-rate averaged 21·9, and was 2·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

The total deaths from all causes included 2 deaths from measles, one death from scarlet fever, one death from diphtheria, one death from enteric fever, and 4 deaths from diarrhoeal diseases, 3 of the latter were deaths of children under 5 years of age; there was also registered the death of one infant at this age period from enteritis. There were two deaths from influenza. In each of the three preceding weeks, deaths from measles were 0, 0, and 0; deaths from scarlet fever were 0, one and 0; deaths from diphtheria were 0, one, and 2; deaths from enteric fever were one, one, and 0; deaths from diarrhoeal diseases were 2, 4 and 2; and deaths from influenza were one, 2 and one.

There were 16 deaths from pneumonia, (all forms); this figure includes one death from lobar pneumonia, 4 deaths from broncho-pneumonia, one death from epidemic pneumonia, and 10 deaths from pneumonia (not defined).

Tuberculous disease caused the deaths of 23 persons, namely—17 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, 2 deaths from tuberculous peritonitis and one death from general tuberculosis. In each of the three preceding weeks, deaths from tuberculous disease numbered 26, 28, and 26.

Carcinoma caused 2 deaths, and cancer (undefined) 5 deaths.

The death of one infant prematurely born was registered.

Included in the 9 deaths from diseases of the brain and nervous system were 2 deaths of infants under one year of age from *convulsions*.

Twenty-seven deaths were attributed to diseases of the heart and blood vessels, and the deaths from bronchitis amounted to 23.

Among the deaths from violence there was one in building operations, one that of a child aged 3 years by burns, one death by homicidal poisoning by carbolic acid, and one death by suicidal poisoning by carbolic acid.

In two instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these were deaths of persons aged 60 years and upwards.

Thirty-seven of the persons whose deaths were registered during the week were under 5 years of age (23 being infants under one year, of whom 7 were under one month old) and 58 were aged 60 years and upwards, including 31 persons aged 70 and upwards, of whom 4 were octogenarians, and 2 (a male and a female) were stated to have been aged 93 and 100 years respectively.

Seventy-nine of the deaths registered during the week occurred in hospitals and other public institutions; of this number 14 took place in the North Dublin Union Workhouse and 18 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week: deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 20·7 per 1,000; the rate in the City was 22·7 (North City Districts, 22·6; South, 22·6) and in the Suburbs, 14·3.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·0 per 1,000 inhabitants, the rate for the City being 1·2 (1·7 in the North City Districts, and 0·7 in the South), and for the Suburbs, 0·6 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (15) are equal to an annual rate of 26·4 per 1,000 and include 2 deaths from measles, 2 deaths from influenza, one death from epidemic pneumonia, 2 deaths from tuberculous phthisis (*phthisis*), and 4 deaths from diseases of the respiratory system.

No. 1 North City District, West (Summer-hill).—The deaths (20) are equal to an annual rate of 26·4 per 1,000. Among the deaths were:—One from epidemic enteritis, one from broncho-pneumonia, 2 from pneumonia (not defined), 2 from tuberculous phthisis (*phthisis*), 2 from diseases of the respiratory system, and one death in building operation (accidental).

No. 2 North City District (Lisburn-street).—The deaths (14) are equivalent to an annual rate of 24·0 per 1,000. Enteric fever caused one death, there were 2 deaths from phthisis and 2 deaths from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (15) represent an annual rate of 23·6 per 1,000. Epidemic enteritis caused one death, broncho-pneumonia and pneumonia (not defined) each caused one death, there were 3 deaths from tuberculous disease, and 4 deaths from diseases of the respiratory system.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19·6 per 1,000 inhabitants; Coolock and Drumcondra, part of, 4·5; and Finglas and Glasnevin part of, 6·9.

No. 1 South City District (South Earl-street).—The deaths (18) represent an annual rate of 22·9 per 1,000. The deaths included one from scarlet fever, one from pneumonia (not defined), 2 from tuberculous disease, 5 from bronchitis, and one death of a child from burns.

No. 2 South City District (Castle-street).—The deaths (7) are equal to an annual rate of 17·0 per 1,000. Of the deaths, one was from epidemic enteritis, one from pneumonia (not defined), and one from bronchitis.

No. 3 South City District (Peter-street).—The deaths (16) are equal to an annual rate of 19·5 per 1,000. There were 2 deaths from broncho-pneumonia, 2 from tuberculous disease, and 3 from diseases of the respiratory system.

No. 4 South City District (Grand Canal-street).—The deaths (23) are equivalent to an annual rate of 33·8 per 1,000, and include one death from lobar pneumonia, 2 deaths from pneumonia (not defined), 5 deaths from tuberculous disease and 9 deaths from diseases of the respiratory system.

New Kilmainham District.—There was one death recorded for this district, equivalent to an annual rate of 5·8 per 1,000.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 15·7; Pembroke, 12·3; Blackrock, 17·9; and Kingstown, 11·8. The only death from any of the principal epidemic diseases tabulated for these districts is one from diphtheria for Kingstown. The 11 deaths from all causes for Rathmines and Rathgar include one death from pneumonia (not defined), one from phthisis, one death by homicide, and one by suicide; of the 7 deaths from all causes for Pembroke there were 2 deaths from pneumonia (not defined), and one death from tuberculous phthisis; and the 4 deaths from all causes for Kingstown include one death from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 39," and the "Tuberculosis Prevention (Ireland) Act, 1903," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 27th November, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of choleraic diarrhoea, as returned.

(b) Not including 2 cases of choleraic diarrhoea, as returned.

(c) From 2nd November.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 27th November, 1909, and the number under treatment at the close of each of the 3 preceding weeks.

From this it appears that:—

Three cases of measles were admitted to hospital, and 6 cases remained under treatment at the close of the week.

Ten cases of scarlet fever were admitted to hospital, 6 were discharged, and 98* cases remained under treatment at the close of the week. At the close of the 3 preceding weeks the number of cases in hospital was 100, 93, and 94 respectively.

One case of typhus was admitted to hospital during the week, one was discharged, and 6 cases remained under treatment in hospital at the close of the week.

Sixteen cases of diphtheria were admitted to hospital, 13 were discharged, and 48 patients remained under treatment at the close of the week. The number of cases in hospital at the close of the 3 preceding weeks was 49, 57, and 45 respectively.

Three cases of enteric fever were admitted to hospital during the week, 6 were discharged, there was one death, and 49 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 9 cases of pneumonia were admitted to hospital, 3 were discharged, there was one death, and 34 cases remained under treatment at the close of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 15·6) was equal to an average annual death-rate of 16·4 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 24·2 per 1,000, the rate for Glasgow being 32·7 and for Edinburgh 18·8.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 27th November. From his Report it appears that of a total of 66 cases notified, 39 were scarlet fever, 14 phthisis, 7 diphtheria, erysipelas, and one cerebro-spinal fever. Among the 465 cases of infectious diseases in hospital at the close of the week were 264 cases of scarlet fever, 83 of measles, 42 of phthisis, 37 of diphtheria, 15 of whooping-cough, 11 of erysipelas, 5 of chicken-pox, 3 of enteric fever and one of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE II.—BIRTHS and DEATHS registered during the Week ending Saturday, 27th November, 1909, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths: also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 27th November, 1909:—

"The mean temperature of this week again fell considerably short of the average for the time of year, but after Tuesday a decided tendency towards warmer, though cloudy, damp weather was observable in almost all parts of the British Isles. During the first three days an anticyclone stretched from Iceland across the Atlantic to these Islands. On Tuesday it was central over Ireland, and under a clear sky and with a calm, stagnant atmosphere, the thermometer fell to 17° F. in the screen at Birr Castle, King's Co.—the reading at 7 a.m. being still as low as 19°. By Wednesday morning the anticyclone had taken up a position further south, the barometer at 7 a.m. standing at 30.60 inches at Brest in Brittany. A warm, moist air-current was then beginning to pass eastwards over the United Kingdom. In the course of the ensuing twenty-four hours the high-pressure system moved slowly still further towards the south, and temperature again rose except in the north-western parts of Ireland and in Scotland. On Friday morning a large cyclonic system was central off the west coast of Iceland, the barometer prevailed and 29.08 inches at Reykjavik. Fresh S.W. winds, clouds, and a damp, warm atmosphere generally prevailed, and considerable falls of rain occurred along the western shores of Ireland and in Wales. In Dublin temperature was low until Friday morning. There was a good deal of smoke fog at times on Monday and Tuesday, and the evening of the latter day was particularly cold—at 9 p.m. the thermometer read 31.0° in the screen and 25.4° on the ground. The atmosphere was very damp at 9 p.m. of Thursday. Lunar halos appeared on the evenings of Friday and Saturday. The mean height of the barometer in Dublin was 30.172 inches, the range of pressure being from 30.563 inches at 9 a.m. of Wednesday (wind, W.) to 29.703 inches at 9 a.m. and again at 9 p.m. of Saturday (wind, S.W. and W.S.W.). The mean temperature was 40.0°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 39.2°. On Wednesday the screened thermometers fell to 29.3°, on Friday they rose to 50.4°. Westerly winds prevailed. The rainfall was .184 inch, of which amount .159 inch was measured on Friday. The weather on Saturday morning was unfavourable for observing an eclipse of the moon."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30.005 inches. The highest reading (30.347) was on Wednesday at 9 a.m., wind W.S.W., and the lowest (29.531) on Saturday at 9 p.m. wind S.W.

The mean temperature for the week was 38.4°, being 4.0° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Friday, on which day the thermometer registered 50.2°, and was lowest on Tuesday, the mercury having fallen to 25.0°. The mean of the Dry Bulb for the week was 37.7° and of the Wet Bulb 35.8°. The mean humidity of the air was .84, complete saturation being represented by 1.0. The rainfall during the week measured 0.251 inch.

At Greenwich the mean temperature for the week was 37.0°, the maximum 44.8°, and the minimum 27.6°; at Glasgow the maximum was 49.0°, the minimum 29.0°, and the mean 40.3°; and at Edinburgh the maximum was 46.3°, the minimum 29.3°, and the mean 37.9°. The rainfall at Greenwich measured 0.01 in., at Glasgow 0.17 in., and at Edinburgh 0.35 in.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

[VOL. XLVI.]

WEEK ENDING SATURDAY, 4TH DECEMBER, 1909.

[No. 48.]

*General Register Office, Charlemont House,
Dublin, 6th December, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 20·1 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Dublin Reg. Area, . . . | 21·7 | 23·6 | 20·7 | 22·1 | 22·0 | Queenstown, . . . | 6·6 | 19·8 | 19·8 | . | 11·6 |
| Dundalk, . . . | 12·0 | 12·0 | 16·0 | 12·0 | 13·0 | Sligo, . . . | 19·2 | 14·4 | 19·2 | 19·2 | 18·0 |
| Galway, . . . | 15·5 | 3·9 | 27·2 | 27·2 | 18·5 | Tralee, . . . | 26·4 | 5·3 | 5·3 | 31·7 | 17·2 |
| Kilkenny, . . . | 9·8 | 29·5 | 19·7 | 24·6 | 20·9 | Waterford, . . . | 21·4 | 11·7 | 25·3 | 19·5 | 19·5 |
| | | | | | | Wexford, . . . | 23·3 | 32·7 | 14·0 | 9·3 | 19·8 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in fourteen of the districts to 5·3 in Tralee, the 6 deaths from all causes for that district including one from whooping-cough. Among the 147 deaths from all causes for Belfast are 6 from whooping-cough, one from diphtheria, and 3 from diarrhoeal diseases. Of the 37 deaths from all causes for Cork is one each from enteric fever and diarrhoea. Of the 10 deaths from all causes for Limerick 2 are from whooping-cough; and included in the 10 deaths from all causes for Waterford is one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 206—112 boys and 94 girls—and the deaths to 180—94 males and 86 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 23·6 in every 1,000 of the population; omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, the rate was 22·1 per 1,000. During the forty-eight weeks ending with Saturday last, the death-rate averaged 22·0, and was 2·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

The total deaths from all causes included one death from diphtheria, one death from enteric fever, 2 deaths from epidemic enteritis of infants under 1 year of age (there were also registered at this age period the deaths of 2 infants from enteritis and one from *gastro-enteritis*), and 3 deaths from influenza. In each of the three preceding weeks, deaths from diphtheria were one, 2, and one; deaths from enteric fever were one, 0, and one; deaths from diarrhoeal diseases were 4, 2, and 4; and deaths from influenza were 2, one, and 2.

Deaths from pneumonia, (all forms) included one death from lobar pneumonia, 11 death from broncho-pneumonia, and 8 deaths from *pneumonia* (not defined).

Tuberculous disease caused 29 deaths; this figure comprises 22 deaths from tuberculous phthisis (*phthisis*), 2 deaths from tuberculous meningitis, one death from tuberculous peritonitis and 4 deaths from other forms of the disease. In each of the three preceding weeks, deaths from tuberculous disease were 28, 26, and 23.

There were 5 deaths, from carcinoma, one death from sarcoma, and 5 deaths from cancer (undefined).

The deaths from diseases of the brain and nervous system (10), include the deaths of infants under one year of age from *convulsions*.

Thirty-one deaths were caused by diseases of the heart and blood vessels, and 24 deaths were caused by bronchitis.

Of 5 deaths attributed to accident or negligence one was by a vehicle, one by burns and one by drowning.

In three instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases comprise deaths of two infants under one year of age, and the death of one female aged 74 years.

Forty-two of the persons whose deaths were registered during the week were under 5 years of age (29 being infants under one year, of whom 4 were under one month old) and 60 were aged 60 years and upwards, including 35 persons aged 70 and upwards, of whom 8 were octogenarians, and 2 (a male and a female) were stated to have been aged 90 and 9 years respectively.

Seventy-eight of the deaths registered during the week occurred in hospitals and other public institutions; of this number 13 took place in the North Dublin Union Workhouse and 21 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 22.1 per 1,000; the rate in the City was 22.1 (North City Districts, 20.6; South, 25.1) and in the Suburbs, 20.0.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 0.5 per 1,000 inhabitants, the rate for the City being 0.7 (0.7 in the North City Districts, and 0.7 in the South), and for the Suburbs, 0.0.

No. 1 North City District, East (Clarence-street, North).—The deaths (11) are equal to an annual rate of 19.4 per 1,000 and include one death from epidemic enteritis, one from *pneumonia* (not defined), one from tuberculous phthisis, and from bronchitis, and one death of an infant attributed to neglect at birth.

No. 1 North City District, West (Summer-hill).—The deaths (16) are equal to an annual rate of 21.1 per 1,000. Among them are one death each from lobar pneumonia, broncho-pneumonia, and *pneumonia* (not defined), 4 deaths each from tuberculous disease and bronchitis, and one accidental death.

No. 2 North City District (Lisburn-street).—The deaths (14) are equivalent to an annual rate of 24.0 per 1,000. One death from epidemic enteritis, one death from *pneumonia* (not defined), 2 deaths from tuberculous phthisis (*phthisis*), 5 deaths from diseases of the respiratory system, and one accidental death were recorded.

No. 3 North City District (Benburb-street).—The deaths (15) represent an annual rate of 23.6 per 1,000. Influenza broncho-pneumonia, and phthisis each caused one death, and diseases of the respiratory system 2 deaths.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19.6 per 1,000 inhabitants; Coolock and Drumcondra, part of, 4.5; and Finglas and Glasnevin part of, 20.6. Among the 3 deaths from all causes for the last-named district is one from tuberculous phthisis.

No. 1 South City District (South Earl-street).—The deaths (15) represent an annual rate of 19.1 per 1,000, and include one death each from diphtheria and enteric fever, 2 deaths from broncho-pneumonia, one death from *pneumonia* (not defined), 3 deaths from tuberculous phthisis (*phthisis*), and 2 deaths from diseases of the respiratory system.

No. 2 South City District (Castle-street).—The deaths (8) are equal to an annual rate of 19.4 per 1,000. Tuberculous meningitis caused one death and bronchitis caused 4 deaths.

No. 3 South City District (Peter-street).—The deaths (17) are equal to an annual rate of 20.7 per 1,000. Among them are one death each from broncho-pneumonia and tuberculous disease, 4 deaths from bronchitis, and one death from accidental burns.

No. 4 South City District (Grand Canal-street).—The deaths (27) are equivalent to an annual rate of 39.7 per 1,000. There were 5 deaths from broncho-pneumonia, one death from lobar pneumonia, 2 deaths from *pneumonia* (not defined), and 5 deaths from tuberculous disease.

New Kilmainham District.—The deaths (5) are equal to an annual rate of 29.0 per 1,000. Broncho-pneumonia caused one death.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar 22.8; Pembroke, 20.1; Blackrock, 11.9; and Kingstown, 17.8. There was no death from any of the principal epidemic diseases tabulated for these districts. The 16 deaths from all causes for Rathmines and Rathgar include one from *pneumonia* (not defined), 2 from tuberculous disease, 3 from diseases of the respiratory system, and one death by drowning; of the 11 deaths from all causes for Pembroke there was one death each from influenza, phthisis, and bronchitis; the 2 deaths recorded for Blackrock include one from phthisis; and among the 6 deaths from all causes for Kingstown are one from influenza, one from *pneumonia* (not defined), and 2 from tuberculous disease.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1891," and the "Tuberculosis Prevention (Ireland) Act, 1908," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R. A. Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 4th December, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including 2 cases of choleraic diarrhoea, as returned.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 4th December, 1909, and the number under treatment at the close of each of the 3 preceding weeks.

From this it appears that:—

One case of measles was admitted to hospital, and 7 cases remained under treatment at the close of the week.

Twenty cases of scarlet fever were admitted to hospital, 24 were discharged, and 94* cases remained under treatment at the close of the week. At the close of the 3 preceding weeks the cases in hospital were 93, 94, and 98 respectively.

One case of typhus was discharged from hospital during the week, and four cases remained under treatment in hospital at its close.

Seven cases of diphtheria were admitted to hospital, 12 were discharged, and 43 patients remained under treatment at the close of the week. The cases in hospital at the close of the 3 preceding weeks numbered 57, 45, and 48 respectively.

Six cases of enteric fever were admitted to hospital during the week, 6 were discharged, there was one death, and 48 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 13 cases of pneumonia were admitted to hospital, 13 were discharged, there was one death, and 40 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 16·0) was equal to an average annual death-rate of 16·5 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 22·3 per 1,000, the rate for Glasgow being 27·3 and for Edinburgh 19·5.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 4th December. From his Report it appears that of a total of 76 cases notified, 37 were scarlet fever, 19 phthisis, 12 diphtheria, erysipelas, and one puerperal fever. Among the 458 cases of infectious diseases in hospital at the close of the week were 259 cases of scarlet fever, 78 of measles, 43 of phthisis, 39 of diphtheria, 19 of whooping-cough, 9 of erysipelas, 4 of chicken-pox, 2 of enteric fever and one of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 4th December, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 4th December, 1909:—

"Throughout this week the distribution of atmospheric pressure over Northwestern Europe was of a cyclonic type, and the weather was in consequence extremely unsettled and changeable. On Sunday and Monday the lowest pressure was found over Iceland, the barometer falling to 28.42 inches at Reykjavik on Monday morning. Secondary disturbances passing northeastwards across the British Isles kept the weather in a broken state. Sunday was mild, and in the course of the following night the thermometer rose to 53° in Dublin, this proving to be the highest reading of the week. Before dawn temperature fell 11° to 42° after squalls and a heavy dash of rain. The Icelandic depression spread southeastwards during Monday and was central off the North Coast of Scotland on Tuesday morning. Squally S.W. winds and showers prevailed on that day, hail falling in several places. A thunderstorm was reported from Malin Head in the early morning. At 7 a.m. of Wednesday the depression lay off the southwest of Norway, while a new disturbance was found off the northwest of Ireland. These two cyclonic systems began to revolve round each other, the former moving westwards from the Norwegian coast, the latter passing quickly in an easterly direction to the neighbourhood of Berlin. Frost set in at this time (Thursday) in Scotland, but over Ireland the barometer fell with great speed as an exceptionally deep cyclonic disturbance travelled quickly across the country eastwards. As the centre approached Dublin the wind backed from S.W. through S. and S.E. to E. with doom and a heavy and continuous downpour of rain. At 5 p.m. the wind shifted to W.S.W. and freshened, the thermometer rising from 42.6° at 4 p.m. to 51.3°. During the following night a tempest swept over the Irish Sea and the greater part of England, while snowstorms raged over the lowlands of Scotland. At 7 a.m. of Friday the unusual barometric reading of 28.09 inches was recorded at North Shields, a complete cyclonic circulation of strong winds or gales being shown round the baric minimum. Saturday was very cold and foggy at first, afterwards fair. In Dublin the mean height of the barometer was only 29.080 inches, or no less than 1.092 inches lower than in the previous week. The highest reading was 29.651 inches at 9 a.m. of Sunday (wind, W.S.W.), the lowest observed was 28.387 inches at 9 p.m. of Thursday (wind also W.S.W.). The corrected mean temperature was 43.3°, the mean dry bulb readings at 9 a.m. and 9 p.m. being 41.8°. The screened thermometers rose to 53° on Monday and fell to 31.6° on Saturday. W.S.W. winds prevailed. The rainfall was 1.174 inches on 6 days, .667 inch being measured on Thursday. Lunar halos were seen on Tuesday and Wednesday evenings. Hail fell on Thursday and Friday, sleet on Friday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 28·928 inches. The highest reading (29·479) was on Sunday at 9 a.m., wind S.W., and the lowest (28·221) on Thursday at 9 p.m., wind S.W.

The mean temperature for the week was 41·8°, being 1·5° below the average for the corresponding period of the 10 years 1899–1908. The temperature was highest on Sunday and Monday, on which days the thermometer registered 52·1°, and was lowest on Saturday, the mercury having fallen to 28·7°. The mean of the Dry Bulb for the week was 40·9° and of the Wet Bulb 39·2°. The mean humidity of the air was ·87, complete saturation being represented by 1·0. The rainfall during the week measured 1·163 inches.

At Greenwich the mean temperature for the week was 44·6°, the maximum 53·0°, and the minimum 34·3°; and at Edinburgh the maximum was 50·6°, the minimum 31·3°, and the mean 38·8°. The rainfall at Greenwich measured 1·40 ins., and at Edinburgh 1·42 ins.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 11TH DECEMBER, 1909.

[No. 49.]

*General Register Office, Charlemont House,
Dublin, 13th December, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 23·2 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 32·7 | 14·0 | 9·3 | 18·7 | 18·7 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·4 per 1,000, the rates varying from 0·0 in seventeen of the districts to 6·9 in Armagh, the 5 deaths from all causes for that district including one from whooping-cough. Among the 218 deaths from all causes for Belfast are 15 from whooping-cough, one from enteric fever, and 2 from diarrhoeal diseases. Of the 27 deaths from all causes for Cork 2 are from diarrhoeal diseases; and included in the 8 deaths from all causes for Ballymena is one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 174—100 boys and 74 girls—and the deaths to 177—90 males and 87 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 23·2 in every 1,000 of the population; omitting the deaths (numbering 9) of persons admitted into public institutions from localities outside the Area, the rate was 22·0 per 1,000. During the forty-nine weeks ending with Saturday last, the death-rate averaged 22·0, and was 2·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

The total deaths from all causes included one death from measles, one death from scarlet fever, 2 deaths from whooping-cough, one death from enteric fever and 4 deaths from diarrhoeal diseases of children under 5 years of age (there was also registered the death of one infant from enteritis at this age period). There was one death from influenza. In the three weekly periods preceding that under notice, deaths from measles were 0, 2, and 0; deaths from scarlet fever were 0, one, and 0; deaths from whooping-cough were 2, 0, and 0; deaths from enteric fever were 0, one, and one; deaths from diarrhoeal diseases were 2, 4, and 2; and deaths from influenza were one, 2, and 3, respectively.

There were 6 deaths from lobar pneumonia, 12 from broncho-pneumonia, and 10 from *pneumonia* (not defined).

Deaths from all forms of tuberculous disease, which had numbered 26, 23, and 29 in each of the three preceding weeks, in the period under notice were 25; this figure includes 17 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, one death from tuberculous peritonitis, and 4 deaths from other forms of the disease.

Three deaths were assigned to carcinoma, and 7 to cancer (undefined).

Prematurity was the registered cause of death of 4 infants.

Among 10 deaths from diseases of the brain and nervous system, was the death of one infant under one year of age from *convulsions*.

Diseases of the heart and blood vessels accounted for 29 deaths, and there were 22 deaths from bronchitis.

Of 4 deaths attributed to accidental causes, one was by a vehicle, and 3 (including one child aged 3 years) were by burns.

In 4 instances the cause of death was "uncertified," there having been no medical attendance during the last illness; these cases include the death of one infant under one year of age, and the death of one person aged 65 years.

Thirty-seven of the persons whose deaths were registered during the week were under 5 years of age (23 being infants under one year, of whom 9 were under one month old) and 55 were aged 60 years and upwards, including 34 persons aged 70 and upwards, of whom 7 were octogenarians, and 3 (females) were stated to have been aged 90, 96, and 100 years respectively.

Seventy of the deaths registered during the week occurred in hospitals and other public institutions; of this number 15 took place in the North Dublin Union Workhouse, and 12 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week: deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 22.0 per 1,000; the rate in the City was 23.4 (North City Districts, 22.2; South, 25.1) and in the Suburbs, 16.5.

The deaths from certain epidemic diseases in the entire area equal an annual rate of 1.2 per 1,000 inhabitants, the rate for the City being 1.4 (23 in the North City Districts, and 0.3 in the South), and for the Suburbs, 0.6 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (17) are equal to an annual rate of 30.0 per 1,000, and include one from measles, one from influenza, one from dysentery, one from lobar pneumonia, 4 from broncho-pneumonia, 3 from tuberculous disease, and 3 from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (10) are equal to an annual rate of 13.2 per 1,000. There was one death from each of the following diseases:—epidemic enteritis, *pneumonia* (not defined), and tuberculous meningitis.

No. 2 North City District (Lisburn-street).—The deaths (18) are equivalent to an annual rate of 30.9 per 1,000. Whooping-cough, enteric fever, and epidemic enteritis each caused one death; broncho-pneumonia, *pneumonia* (not defined), and *phthisis* each caused 2 deaths; bronchitis caused 3 deaths, and there was one death by accidental burning.

No. 3 North City District (Benburb-street).—The deaths (15) represent an annual rate of 23.6 per 1,000. Of the deaths one was from epidemic enteritis, one from *pneumonia* (not defined), and there were 3 deaths from *phthisis*.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 29.4 per 1,000 inhabitants; Coolock and Drumcondra, part of, 18.1; and Finglas and Glasnevin, part of, 0.0. Among the 3 deaths from all causes for Clontarf and Howth, No. 1, part of, is one death from lobar pneumonia.

No. 1 South City District (South Earl-street).—The deaths (24) represent an annual rate of 30.5 per 1,000. Broncho-pneumonia, *pneumonia* (not defined), and *phthisis* each caused one death; there were 5 deaths from bronchitis and one death by accidental burning.

No. 2 South City District (Castle-street).—The deaths (9) are equal to an annual rate of 21.8 per 1,000, and include one death from lobar pneumonia, one from broncho-pneumonia, 2 deaths from tuberculous *phthisis*, 2 deaths from bronchitis, and one accidental death.

No. 3 South City District (Peter-street).—The deaths (17) are equal to an annual rate of 20.7 per 1,000. Scarlet fever caused one death, there was one death from *pneumonia* (not defined), there were 7 deaths from tuberculous disease, and 5 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (19) are equivalent to an annual rate of 27.9 per 1,000. There were 6 deaths from pneumonia (all forms), one death from *phthisis*, and 3 deaths from bronchitis.

New Kilmainham District.—The deaths (3) are equal to an annual rate of 17.4 per 1,000. One death from broncho-pneumonia was included in the 3 deaths registered.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 10.0; Pembroke, 27.4; Blackrock, 29.8; and Kingstown, 5.9. The only death from any of the principal epidemic diseases tabulated for these districts is one from whooping-cough for Rathmines and Rathgar, the 7 deaths from all causes for this district including also one death from *phthisis*. Among the 15 deaths from all causes for Pembroke are 2 from *pneumonia* (not defined), one from lobar pneumonia, and one from *phthisis*; and the 5 deaths from all causes for Blackrock include one from tuberculous disease, and one from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," and the "Tuberculosis Prevention (Ireland) Act, 1908," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 11th December, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 11th December, 1909, and the number under treatment at the close of each of the 3 preceding weeks.

From this it appears that:—

Seven cases of measles were admitted to hospital during the week, one was discharged, and 13 cases remained under treatment at the close of the week.

Fifteen cases of scarlet fever were admitted to hospital, 14 were discharged, and 95* cases remained under treatment at the close of the week. At the close of the 3 preceding weeks the cases in hospital were 94, 98, and 94, respectively.

One case of typhus was admitted to hospital during the week, one was discharged, and four cases remained under treatment in hospital at its close.

Five cases of diphtheria were admitted to hospital, 17 were discharged, there was one death, and 30 patients remained under treatment at the close of the week. The cases in hospital at the close of the 3 preceding weeks numbered 45, 48, and 43, respectively.

Six cases of enteric fever were admitted to hospital during the week, 9 were discharged, there was one death, and 44 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 24 cases of pneumonia were admitted to hospital, 16 were discharged, there was one death, and 47 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 16·6) was equal to an average annual death-rate of 16·6 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 23·8 per 1,000, the rate for Glasgow being 31·7 and for Edinburgh 17·5.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 11th December. From his Report it appears that of a total of 58 cases notified, 21 were scarlet fever, 17 phthisis, 13 diphtheria, erysipelas, one cerebro-spinal fever, and one puerperal fever. Among the 436 cases of infectious diseases in hospital at the close of the week were 236 cases of scarlet fever, 77 of measles, 41 of phthisis, 38 of diphtheria, 20 of whooping-cough, 10 of erysipelas, 2 of chicken-pox, 2 of enteric fever, 2 of cerebro-spinal fever, and one of puerperal fever.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday 11th December, 1909, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature and Rainfall** for each of the two Weeks immediately preceding.

[illegible]

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1909. (b) Formerly described as "Simple Continued Fever." (c) Exclusive of Pneumonia. (d) Exclusive of deaths of persons (including one under 1 year old and 3 at 60 years or upwards), admitted to hospital from localities outside the Area. (e) It has been found impracticable to obtain Meteorological Observations from all stations in the area. (f) Observed during the period of influenza epidemic in 1918-19. (g) Observed during the period of influenza epidemic in 1918-19. (h) Observations taken from the Dublin General Sanatorium, Phoenix Park.

240 Queen's Station and Ordnance Survey Office, Phoenix Park.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 11th December, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

| NAMES OF DISEASES, &c. | | DEATHS IN DUBLIN REGISTRATION AREA. | | | | | | | | | | | | | | | | | TOTAL FOR DUBLIN REGISTRATION AREA. | Deaths in Institutions of Persons admitted from without the Registration Area. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 11th December, 1909:—

"Weather of the most opposite description prevailed at the beginning and towards the close of this week. An extremely cold spell held until Thursday morning—thence to the end an equally pronounced warm spell was experienced. The period opened with two baric minima, in which atmospheric pressure was below 28.7 inches, viz., the one over Denmark, the other off the Shetlands. A third depression was developing at the same time over the south of Ireland, whence it passed in a north-easterly direction up St. George's Channel, its centre stretching from the Co. Wicklow to Cardigan Bay on Monday morning. This system caused a snowstorm of exceptional violence in the Dublin district. Rain and sleet set in on Sunday evening, but by 10 p.m. snow lay in the streets of the City to the depth of some 2 inches. On Monday great gloom prevailed and showers of rain and hail fell at times. By 7 a.m. of Tuesday the centre of the depression had reached Great Yarmouth and was passing out to sea from the Norfolk coast. The precipitation in Dublin due to this disturbance measured 1.150 inches. Snow lay deep upon the mountains, and even in the City it did not disappear until a late hour on Thursday. On that day temperature rose fast over the British Isles and Scandinavia—as much as 23° at Bath and 29° at HERNÖSAND in Sweden. This sudden change was caused by the setting in of a warm S.W. wind in connection with a cyclonic system which travelled eastwards from Iceland to Norway in the interval between the mornings of Thursday and Friday. In Dublin the mean height of the barometer was 29.605 inches, the range being from 28.962 inches at 7 a.m. of Monday (wind, N.E.) to 30.195 inches at 9 p.m. of Wednesday (wind, W.). The corrected mean temperature was 40.9°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 40.8°. The screened thermometers fell to 28.1° on Tuesday but rose to 56.3° on Friday. The dominant winds were W. and S.W. Rainfall amounted to 1.389 inches on 5 days, as much as 1.029 inches being the result of the snowstorm on Sunday night."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.442 inches. The highest reading (30.027) was on Wednesday at 9 p.m., wind W.S.W., and the lowest (28.836) on Monday at 9 a.m., wind N.E.

The mean temperature for the week was 39.1°, being 3.9° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Friday, on which day the thermometer registered 55.7°, and was lowest on Tuesday, the mercury having fallen to 25.1°. The mean of the Dry Bulb for the week was 39.8° and of the Wet Bulb 38.8°. The mean humidity of the air was .90, complete saturation being represented by 1.0. The rainfall during the week measured 1.202 inches.

At Greenwich the mean temperature for the week was 38.6°, the maximum 47.9°, and the minimum 28.8°; at Glasgow the maximum was 53.2°, the minimum 22.0°, and the mean 37.0°; and at Edinburgh the maximum was 54.9°, the minimum 21.9°, and the mean 34.6° [six days' average]. The rainfall at Greenwich measured 0.35 in., at Glasgow 1.25 ins., and at Edinburgh 0.74 in.

The information in the preceding paragraph has been kindly furnished by the Registrar-General of England and Wales and of Scotland.

[VOL. XLVI.]

WEEK ENDING SATURDAY, 18TH DECEMBER, 1909.

[No. 50.]

*General Register Office, Charlemont House,
Dublin, 20th December, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 21·7 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Dublin Reg. Area, | 20·7 | 22·1 | 22·0 | 19·4 | 21·1 | Queenstown, | 19·8 | . . . | 19·8 | 6·6 | 11·6 |
| Dundalk, | 16·0 | 12·0 | 23·9 | 16·0 | 17·0 | Sligo, | 19·2 | 19·2 | 9·6 | 14·4 | 15·6 |
| Galway, | 27·2 | 27·2 | 23·3 | 23·3 | 25·2 | Tralee, | 5·3 | 31·7 | 21·1 | 36·4 | 21·1 |
| Kilkenny, | 19·7 | 24·6 | 14·7 | 9·8 | 17·2 | Waterford, | 25·3 | 19·5 | 11·7 | 33·1 | 22·4 |
| | | | | | | Wexford, | 14·0 | 9·3 | 18·7 | 18·7 | 15·2 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·2 per 1,000, the rates varying from 0·0 in fifteen of the districts to 21·1 in Tralee, the 5 deaths from all causes for that district including 4 from whooping-cough. Among the 177 deaths from all causes for Belfast are 9 from whooping-cough, and one from diarrhoea. Of the 34 deaths from all causes for Cork one is from scarlet fever. Among the 17 deaths from all causes for Waterford are one from whooping-cough and one from diarrhoea; and included in the 9 deaths from all causes for Drogheda is one from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 216—20 boys and 96 girls—and the deaths to 158—79 males and 79 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 20·7 in every 1,000 of the population; omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, the rate was 19·4 per 1,000. During the fifty weeks ending with Saturday last, the death-rate averaged 22·0, and was 2·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II. ‡ See columns 10-18 of Table II.

The deaths from all causes, numbering 158, included one death from each of measles and scarlet fever, 2 deaths from each of whooping-cough and diphtheria, one death from *diarrhoea*, of an infant under one year of age (there were also 2 deaths from *gastro-enteritis* and one from enteritis of infants registered), and one death from influenza. In the three preceding weekly periods, deaths from measles were 2, 0, and one; deaths from scarlet fever were one, 0, and one; deaths from whooping-cough were 0, 0, and 2; deaths from diphtheria were one, one, and 0; deaths from diarrhoeal diseases were 4, 2, and 4; and deaths from influenza were 2, 3, and one.

There were 3 deaths from lobar pneumonia, 10 from broncho-pneumonia, and 6 from *pneumonia* (not defined).

Deaths from tuberculous disease (all forms), which in the three preceding weeks were 23, 29, and 25, respectively, in the period under notice numbered 21, and included 15 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, one death from *tabes mesenterica*, and 2 deaths from other forms of the disease.

Of 8 deaths from malignant disease, 3 were attributed to carcinoma, and 5 to cancer (undefined).

The deaths of 2 infants, prematurely born, were registered.

Ten deaths (including 2 of children under 5 years of age from *convulsions*) were assigned to diseases of the brain and nervous system.

Diseases of the heart and blood vessels accounted for 25 deaths, and 23 deaths were caused by bronchitis.

Of 4 deaths attributable to accident or negligence, one was caused by a horse, and 2 were by burns or scalds of children under 5 years of age.

In 5 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 2 children under 5 years of age (including one infant under one year old), and the death of one person aged 67 years.

Fifty-one of the persons whose deaths were registered during the week were under 5 years of age (28 being infants under one year, of whom 5 were under one month old) and 51 were aged 60 years and upwards, including 28 persons aged 70 and upwards, of whom 11 were octogenarians, and one (a female) was stated to have been aged 93 years.

Sixty-six of the deaths registered during the week occurred in hospitals and other public institutions; of this number 13 took place in the North Dublin Union Workhouse, and 12 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 19·4 per 1,000; the rate in the City was 19·4 (North City Districts, 20·6; South, 18·1) and in the Suburbs, 19·4.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 0·9 per 1,000 inhabitants, the rate for the City being 1·2 (1·7 in the North City Districts, and 0·7 in the South), and for the Suburbs, 0·0 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (14) are equal to an annual rate of 24·7 per 1,000. Measles caused one death, there were 3 deaths from tuberculous phthisis (*phthisis*), and 4 deaths from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (11) are equal to an annual rate of 14·5 per 1,000. Lobar pneumonia and *pneumonia* (not defined) each caused one death, there was one death from *phthisis*, and bronchitis caused 2 deaths.

No. 2 North City District (Lisburn-street).—The deaths (22) are equivalent to an annual rate of 37·7 per 1,000. Whooping-cough caused 2 deaths, there was one death from *diarrhoea*, also one death from *pneumonia* (not defined); there were 3 deaths from tuberculous disease, 4 deaths from bronchitis, and one from accidental scalds.

No. 3 North City District (Benburb-street).—The deaths (11) represent an annual rate of 17·3 per 1,000, and include one death from diphtheria, one death from broncho-pneumonia, one death from *phthisis*, and 3 deaths from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 29·4 per 1,000 inhabitants; Coolock and Drumecondra, part of, 0·0; and Finglas and Glasnevin, part of, 6·9. Of the 3 deaths from all causes Clontarf and Howth, No. 1, part of, one is from tuberculous meningitis; and the only death recorded for Finglas and Glasnevin, part of, is one caused by burns.

No. 1 South City District (South Earl-street).—The deaths (15) represent an annual rate of 19·1 per 1,000. The deaths included one from scarlet fever, 2 from tuberculous disease, one death from bronchitis, and one accidental death.

No. 2 South City District (Castle-street).—The deaths (10) are equal to an annual rate of 24·2 per 1,000. There was one death from diphtheria, there were 3 deaths from broncho-pneumonia, 3 from tuberculous disease, and one death from bronchitis.

No. 3 South City District (Peter-street).—The deaths (11) are equal to an annual rate of 13·4 per 1,000. Among the deaths were 2 from broncho-pneumonia, one from *pneumonia* (not defined), and one from tuberculous meningitis.

No. 4 South City District (Grand Canal-street).—The deaths (14) are equivalent to an annual rate of 20·6 per 1,000, and included 2 deaths from broncho-pneumonia, one from *pneumonia* (not defined), one death from *phthisis*, and 3 deaths from diseases of the respiratory system.

New Kilmainham District.—The deaths (2) are equal to an annual rate of 11·6 per 1,000. There was no death from any of the principal epidemic diseases or from tuberculous disease registered.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar 17·1; Pembroke, 22·0; Blackrock, 17·9; and Kingstown, 20·7. There was no death from any of the principal epidemic diseases tabulated for these districts. Among the 12 deaths from all causes for Rathmines and Rathgar are 3 from lobar pneumonia and 4 from bronchitis; the 12 deaths from all causes for Pembroke include one death from influenza, one death from *pneumonia* (not defined), and 2 deaths from tuberculous phthisis. The 3 deaths from all causes for Blackrock include one from bronchitis and one accidental death; and of the 7 deaths from all causes for Kingstown one is from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," and the "Tuberculosis Prevention (Ireland) Act, 1903," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 18th December, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 18th December, 1909, and the number under treatment at the close of each of the 3 preceding weeks.

From this it appears that:—

Three cases of measles were admitted to hospital during the week, 3 were discharged, and 13 cases remained under treatment at the close of the week.

Sixteen cases of scarlet fever were admitted to hospital, 12 were discharged, there were two deaths, and 97* cases remained under treatment at the close of the week. At the close of the 3 preceding weeks the cases in hospital were 98, 94, and 95, respectively.

One case of typhus was admitted to hospital during the week, and five cases remained under treatment in hospital at its close.

Fifteen cases of diphtheria were admitted to hospital, 5 were discharged, there were 2 deaths, and 38 patients remained under treatment at the close of the week. The cases in hospital at the close of the 3 preceding weeks numbered 48, 43, and 30, respectively.

Ten cases of enteric fever were admitted to hospital during the week, 7 were discharged, and 47 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 10 cases of pneumonia were admitted to hospital, 10 were discharged, there were 4 deaths, and 43 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 14·3) was equal to an average annual death-rate of 15·0 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 19·6 per 1,000, the rate for Glasgow being 23·0 and for Edinburgh 17·2.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 18th December. From this Report it appears that of a total of 68 cases notified, 34 were scarlet fever, 24 phthisis, 5 diphtheria, 4 erysipelas, and one enteric fever. Among the 433 cases of infectious diseases in hospital at the close of the week were 236 cases of scarlet fever, 85 of measles, 45 of phthisis, 31 of diphtheria, 16 of whooping-cough, 7 of erysipelas, 2 of chicken-pox, 2 of enteric fever, 2 of cerebro-spinal fever, and one of puerperal fever.

See note () at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 18th December, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 18th December, 1909:—

"Cloudy, dull, uneventful weather prevailed during the greater part of this week. There was some rain on Sunday morning, and light showers fell on the last three days, but the measurement of rainfall in Dublin was small, save for a snowstorm on the morning of Sunday, December 19th. Until Thursday an area of high barometer was centred over the south of Scandinavia, whence it stretched southwestwards to Great Britain and Ireland. This anticyclone reached its fullest development on Tuesday morning, when the barometer read 30.83 inches at Karlstad in Sweden and 30.63 inches at Aberdeen. The system threw a freshening easterly wind on the British and Irish coasts, but owing apparently to the widespread prevalence of cloud no particularly low temperatures were reported save from Nairn, in the N.E. of Scotland, round which place a local frost zone was observed on and after Monday—the minima in the screen being 28°, 26°, 22°, 28°, 27° and 28°, respectively, and the thermometer not rising above 32° by day from Monday to Friday. On Wednesday morning a deep depression was observed near the Azores (at Horta the barometer stood at 29.08 inches). This system subsequently crossed the Atlantic in a north-easterly direction, arrived over the Cornish Peninsula on Friday morning, and passed thence up the English Channel and across the S.E. of England. It caused very gloomy, cold, damp weather in and near Dublin, while rain, sleet and snow fell rather heavily in the South of England, especially along the Channel coast. Severe frost prevailed throughout the week in Southern Germany—on Wednesday morning Munich was 19° colder than Haparanda on the Arctic Circle, and on Friday a minimum of 5° F. was recorded in the Bavarian capital. In Dublin, the mean atmospheric pressure was 30.066 inches, the barometer rising to 30.477 inches at 9 p.m. of Tuesday (wind, E.N.E.) and falling to 29.445 inches at 9 p.m. of Saturday (wind, calm). The corrected mean temperature was 42.6°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 42.1°. The screened thermometers rose to 49.3° on Sunday and fell to 34.3° on Saturday. Easterly winds prevailed. The rainfall was .462 inch on 5 days, .420 inch being measured for Saturday, the result of a snowstorm on the following morning."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.885 inches. The highest reading (30.307) was on Tuesday at 9 p.m., wind E.N.E., and the lowest (29.281) on Saturday at 9 p.m., air calm.

The mean temperature for the week was 41.4°, being 0.1° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 49.0°, and was lowest on Saturday, the mercury having fallen to 30.2°. The mean of the Dry Bulb for the week was 40.9° and of the Wet Bulb 38.6°. The mean humidity of the air was .82, complete saturation being represented by 1.0. The rainfall during the week measured 0.207 inch.

At Greenwich the mean temperature for the week was 38.4°, the maximum 42.6°, and the minimum 32.6°; at Glasgow the maximum was 47.2°, the minimum 27.5°, and the mean 38.5°; and at Edinburgh the maximum was 45.2°, the minimum 31.6°, and the mean 38.6°. The rainfall at Greenwich measured 0.43 in., at Glasgow 0.02 in., and at Edinburgh 0.05 in.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

[VOL. XLVI.]

WEEK ENDING SATURDAY, 25TH DECEMBER, 1909.

[No. 51.]

*General Register Office, Charlemont House,
Dublin, 28th December, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 18·2 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 9·3 | 18·7 | 18·7 | 23·3 | 17·5 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 0·8 per 1,000, the rates varying from 0·0 in eighteen of the districts to 1·5 in Belfast, the 144 deaths from all causes for that district including 10 from whooping-cough and one from diarrhœa; and of the 15 deaths from all causes for Londonderry one is from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 135—59 boys and 76 girls—and the deaths to 155—76 males and 79 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 20·3 in every 1,000 of the population; omitting the deaths (numbering 5) of persons admitted into public institutions from localities outside the Area, the rate was 19·6 per 1,000. During the fifty-one weeks

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

ending with Saturday last, the death-rate averaged 21·9, and was 2·8 below the mean rate for the corresponding portions of the ten years 1899-1908.

The deaths from all causes, which numbered 155, included one death from scarlet fever, 1 death from whooping-cough, 3 deaths from enteric fever, and 6 deaths from influenza. In the three preceding weeks, deaths from scarlet fever were 0, one, and one; deaths from whooping-cough were 0, 2, and 2; deaths from enteric fever were one, one, and 0; and deaths from influenza were 3, one, and one respectively.

Of 20 deaths from pneumonia, 3 were attributed to lobar pneumonia, 11 to broncho-pneumonia, and 6 to *pneumonia* (not defined).

Tuberculous disease caused the deaths of 18 persons, namely 14 deaths from tuberculous phthisis (*phthisis*), and 4 deaths from tuberculous meningitis. In each of the three preceding weeks deaths from all forms of tuberculous disease were 29, 25, and 21.

There were 3 deaths from carcinoma, and 3 deaths from cancer (undefined).

The deaths of 3 prematurely born infants were registered.

There were 2 deaths from *convulsions* of infants under 1 year of age included in 10 deaths from diseases of the brain and nervous system.

Twenty-one deaths were caused by diseases of the heart and blood vessels, and bronchitis accounted for the deaths of 28 persons.

Of 2 deaths assigned to accidental causes one was of a child aged 4 years by burning.

In 7 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 3 infants under 1 year of age, and the death of one person aged 70 years.

Forty-four of the persons whose deaths were registered during the week were under 5 years of age (28 being infants under one year, of whom 8 were under one month old) and 46 were aged 60 years and upwards, including 26 persons aged 70 and upwards, of whom 8 were octogenarians, and one (a female) was stated to have been aged 101 years.

Seventy-three of the deaths registered during the week occurred in hospitals and other public institutions; of this number 16 took place in the North Dublin Union Workhouse, and 22 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 19·6 per 1,000; the rate in the City was 19·4 (North City Districts, 20·9; South, 17·8) and in the Suburbs, 20·5.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 0·7 per 1,000 inhabitants, the rate for the City being 0·3 (0·7 in the North City Districts, and 0·0 in the South), and for the Suburbs, 1·7 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (10) are equal to an annual rate of 17·6 per 1,000, and include one death from broncho-pneumonia and 3 deaths from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (17) are equal to an annual rate of 22·4 per 1,000. There was one death from influenza, also one death from lobar pneumonia, there were 2 deaths from broncho-pneumonia, 4 from tuberculous phthisis (*phthisis*), and 3 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (11) are equivalent to an annual rate of 24·0 per 1,000. Enteric fever caused one death, there were 2 deaths from tuberculous phthisis (*phthisis*), one death from broncho-pneumonia, and one death from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (18) represent an annual rate of 28·3 per 1,000. The deaths included one from enteric fever, 3 from broncho-pneumonia, one from *pneumonia* (not defined), 2 from tuberculous phthisis, one death from bronchitis, and one death by burning.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Finglas and Glasnevin, part of, 27·4 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Coolock and Drumcondra, part of, 0·0. The 4 deaths from all causes for Finglas and Glasnevin, part of, include one death from lobar pneumonia, one from *pneumonia* (not defined), and one death attributed to accident.

No. 1 South City District (South Earl-street).—The deaths (13) represent an annual rate of 16·5 per 1,000. Among the deaths was one from each of broncho-pneumonia, *pneumonia* (not defined), and tuberculous phthisis, and 6 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (10) are equal to an annual rate of 24·2 per 1,000. Lobar pneumonia, broncho-pneumonia, *phthisis*, tuberculous meningitis, and bronchitis each caused one death.

No. 3 South City District (Peter-street).—The deaths (17) are equal to an annual rate of 20·7 per 1,000. Broncho-pneumonia and tuberculous meningitis each caused 2 deaths, and there were 6 deaths from diseases of the respiratory system.

No. 4 South City District (Grand Canal-street).—The deaths (11) are equivalent to an annual rate of 16·2 per 1,000. Tuberculous phthisis and tuberculous meningitis each caused one death, and bronchitis caused 5 deaths.

New Kilmainham District.—There were no deaths recorded for this district.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 20·0; Pembroke, 16·5; Blackrock, 6·0; and Kingstown, 35·5. The deaths from the principal epidemic diseases tabulated for these districts include one death each from scarlet fever and whooping-cough for Rathmines and Rathgar, and one death from whooping-cough for Kingstown. Among the 14 deaths from all causes for Rathmines and Rathgar are 2 from influenza, one from *phthisis*, and one from bronchitis; of the 9 deaths from all causes for Pembroke one is from influenza, one from *phthisis*, and there are 2 from diseases of the respiratory system; and of the 12 deaths from all causes for Kingstown 2 are from influenza, 3 from *pneumonia* (not defined), and one from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," and the "Tuberculosis Prevention (Ireland) Act, 1908," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 25th December, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 25th December, 1909, and the number under treatment at the close of each of the 3 preceding weeks.

From this it appears that:—

Eight cases of measles were admitted to hospital during the week, 3 were discharged, and 18 cases remained under treatment at the close of the week.

Ten cases of scarlet fever were admitted to hospital, 28 were discharged, there was one death, and 78* cases remained under treatment at the close of the week. At the close of the 3 preceding weeks the cases in hospital were 94, 95, and 97, respectively.

One case of typhus was admitted to hospital during the week, and 6 cases remained under treatment in hospital at its close.

Eight cases of diphtheria were admitted to hospital, 9 were discharged, and 37 patients remained under treatment at the close of the week. The cases in hospital at the close of the 3 preceding weeks numbered 43, 30, and 38, respectively.

Four cases of enteric fever were admitted to hospital during the week, 11 were discharged, and 40 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 8 cases of pneumonia were admitted to hospital, 18 were discharged, there were 2 deaths, and 31 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 15.1) was equal to an average annual death-rate of 15.4 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 19.5 per 1,000, the rate for Glasgow being 21.5 and for Edinburgh 16.3.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 25th December. From this Report it appears that of a total of 51 cases notified, 28 were scarlet fever, 14 phthisis, 6 diphtheria, and 3 erysipelas. Among the 437 cases of infectious diseases in hospital at the close of the week were 232 cases of scarlet fever, 97 of measles, 45 of phthisis, 24 of diphtheria, 16 of whooping-cough, 8 of erysipelas, 3 of chicken-pox, 2 of enteric fever, 2 of cerebro-spinal fever, and one of puerperal fever.

* See note (*) at foot of Table XII

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 25th December, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 25th December, 1909:—

"The most striking characteristic of this week was its coldness. The mean temperature in Dublin of the whole period was 35°8', or some 5° below the average, while that of the first three days was only 29°5'. On Tuesday morning the thermometer fell to 15°5' in the screen and to 16°2' on the snow, which lay about 3 inches deep at the time. On Wednesday a thaw which began at 1 p.m. of Tuesday continued, rain fell, and the thermometer rose to a maximum of 46°3'. Next day was still milder, a temperature of 43°2' being reached—the highest of the week. Christmas Eve was bright throughout with slight ground frost, and Christmas Day was also fair till the afternoon, when the sky became cloudy to overcast, rain falling after 7 p.m. with a southerly wind and higher temperature (43°9' at 9 p.m.). At 7 a.m. of Sunday a well-marked secondary cyclonic depression lay between Dublin and Holyhead. It caused a snowstorm in the Dublin district. The sky cleared at midday and keen frost set in over snow-covered Ireland. A thunderstorm occurred at night in Liverpool. On Monday night the frost became very intense in Ireland and Great Britain, the screened thermometers marking 12° at Birr Castle, 17° at Nottingham, 18° at Wick, 19° at Bath, and 19°5' in Dublin. This last reading was the lowest temperature recorded in Dublin since February 7, 1895. On Tuesday a vast depression, central in mid-Atlantic near the Azores, spread over Ireland and England. On Europe generally. It brought copious rainfalls and a phenomenal rise of temperature to France and the South of Sweden. Wednesday morning the thermometric range was from 68° at Biarritz to -2° at Karlstad in the South of Sweden. In the course of the same day temperature reached 60° in Paris and 55° in London. Atlantic weather held during the remainder of the week. In Dublin the mean height of the barometer was 29.345 inches, the range being from 29.644 inches at 4 p.m. of Wednesday (wind, S.W.) to 29.800 inches at 9 a.m. of Saturday (wind, W.). The corrected mean temperature was 35°8', the mean dry bulb temperature at 9 a.m. and 9 p.m. being 35°3'. The extremes have been given above. W. and S.W. winds prevailed, except on Sunday, when the direction was northerly. The rainfall was 1.447 inches on 6 days, .969 inch being recorded on Tuesday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.180 inches. The highest reading (29.640) was on Saturday at 9 a.m., wind S.W., and the lowest (28.515) on Wednesday at 9 a.m., air calm.

The mean temperature for the week was 33.5°, being 8.6° below the average for the corresponding period of the 9 years—1899 and 1901–8. The temperature was highest on Thursday, on which day the thermometer registered 48.0°, and was lowest on Tuesday, the mercury having fallen to 8.8°. The mean of the Dry Bulb for the week was 33.3° and of the Wet Bulb 32.6°. The mean humidity of the air was .86, complete saturation being represented by 1.0. The rainfall during the week measured 1.183 inches.

At Greenwich the mean temperature for the week was 39.0°, the maximum 53.2°, and the minimum 22.1°; at Glasgow the maximum was 44.5°, the minimum 20.6°, and the mean 31.9°; and at Edinburgh the maximum was 45.2°, the minimum 22.7°, and the mean 32.1°. The rainfall at Greenwich measured 0.46 in., at Glasgow 0.76 in., and at Edinburgh 0.36 in.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

[VOL. XLVI.]

WEEK ENDING SATURDAY, 1ST JANUARY, 1910.

[No. 52.]

*General Register Office, Charlemont House,
Dublin, 3rd January, 1910.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 25·4 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Dundalk, . . . | 23·9 | 16·0 | 8·0 | 8·0 | 14·0 | Sligo, . . . | 9·6 | 14·4 | 4·8 | 43·2 | 18·0 |
| Galway, . . . | 23·3 | 23·3 | 23·3 | 27·2 | 21·3 | Tralee, . . . | 21·1 | 26·4 | 15·9 | 15·9 | 19·8 |
| Kilkenny, . . . | 14·7 | 9·8 | 9·8 | 39·3 | 18·4 | Waterford, . . . | 11·7 | 33·1 | 13·6 | 11·7 | 17·5 |
| | | | | | | Wexford, . . . | 18·7 | 18·7 | 23·3 | 23·3 | 21·0 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·5 per 1,000, the rates varying from 0·0 in thirteen of the districts to 5·7 in Newtownards, the 5 deaths from all causes for that district including one from whooping-cough. Among the 192 deaths from all causes for Belfast are 13 from whooping-cough, one from diphtheria, and one from diarrhoea. Of the 42 deaths from all causes for Cork one is from enteric fever. One death from whooping-cough is included in the 16 deaths from all causes for Limerick ; and one death from whooping-cough is also among the 6 deaths from all causes for Waterford. Of the 7 deaths from all causes for Galway one is from typhus. Included in the 5 deaths from all causes for Drogheda is one from enteric fever ; and one of the 3 deaths from all causes for Tralee is from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 232—131 boys and 101 girls—and the deaths to 205—103 males and 102 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 26·8 in every 1,000 of the population ; omitting the deaths (numbering 7) of persons admitted into public institutions from localities outside the Area, the rate was 25·9 per 1,000. During the fifty-two weeks ending with Saturday last, the death-rate averaged 22·0, and was 2·7 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

Among the deaths there were 3 from scarlet fever, one from whooping-cough, one from diphtheria, 2 from enteric fever, and 4 from diarrhoeal diseases of children under 5 years of age (there were also registered at this age-period 2 deaths from enteritis, and one death from *gastro-enteritis*). In each of the three preceding weeks, deaths from scarlet fever were one, one, and one; deaths from whooping-cough were 2, 2, and 2; deaths from diphtheria were 0, 2, and 0; deaths from enteric fever were one, 0, and 3; and deaths from diarrhoeal diseases were 4, 1, and 0. The deaths of 4 persons were attributed to influenza. Deaths from influenza in the three preceding weeks numbered one, one, and 6, respectively.

Of 22 deaths from pneumonia (all forms) one was from lobar pneumonia, 15 were from broncho-pneumonia, and 6 from *pneumonia* (not defined).

The deaths from tuberculous disease, in number 21, included 15 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, and 3 deaths from all other forms of the disease. In the three weeks preceding, deaths from all forms of tuberculous disease were 25, 21, and 18 respectively.

Carcinoma and sarcoma each caused one death and 2 deaths were referred to cancer (undefined).

Nine deaths of prematurely born infants were recorded.

There were 7 deaths of infants from *convulsions* included in 16 deaths from diseases of the brain and nervous system.

Thirty-seven deaths were caused by diseases of the heart and blood vessels, and the deaths from bronchitis amounted to 39.

Of 2 deaths from accidental causes one was of a child aged 4 years from burning, and one of an infant by suffocation in bed.

In 10 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases comprise the deaths of 6 children under 5 years of age (including 5 infants under one year old), and the deaths of 4 persons aged 60 years and upwards.

Seventy-one of the persons whose deaths were registered during the week were under 5 years of age (49 being infants under one year, of whom 19 were under one month old) and 56 were aged 60 years and upwards, including 29 persons aged 70 and upwards, of whom 5 were octogenarians, and one (a man) was stated to have been aged 91 years.

Eighty-six of the deaths registered during the week occurred in hospitals and other public institutions; of this number 18 took place in the North Dublin Union Workhouse, and 28 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 25·9 per 1,000; the rate in the City was 29·1 (North City Districts, 24·9; South, 33·4) and in the Suburbs, 15·4.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·3 per 1,000 inhabitants, the rate for the City being 1·5 (1·7 in the North City Districts, and 1·4 in the South), and for the Suburbs, 0·6 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (12) are equal to an annual rate of 21·2 per 1,000, and include one from enteric fever, 2 from influenza, one from broncho-pneumonia, one from *pneumonia* (not defined) one from tuberculous meningitis, and one death from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (23) are equal to an annual rate of 30·3 per 1,000. Influenza and lobar-pneumonia each caused one death, there were 2 deaths from broncho-pneumonia, one from tuberculous phthisis, and 4 deaths from diseases of the respiratory system.

No. 2 North City District (Lisburn-street).—The deaths (17) are equivalent to an annual rate of 29·2 per 1,000. Enteric fever caused one death, epidemic enteritis 2 deaths, broncho-pneumonia one death, *pneumonia* (not defined) 2 deaths, and bronchitis one death.

No. 3 North City District (Benburb-street).—The deaths (14) represent an annual rate of 22·0 per 1,000. The deaths included one from broncho-pneumonia, 3 from *phthisis*, and 2 from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants: Coolock and Drumcondra, part of, 27·2, and Finglas and Glasnevin, part of, 13·7. The only death recorded for Clontarf and Howth, No. 1, part of, is one from bronchitis. Of the 6 deaths from all causes for Coolock and Drumcondra, part of, one is from tuberculous phthisis and one from bronchitis; and of the 2 deaths recorded for Finglas and Glasnevin, part of, one is from scarlet fever, and one from broncho-pneumonia.

No. 1 South City District (South Earl-street).—The deaths (27) represent an annual rate of 34·3 per 1,000. Diphtheria caused one death, general tuberculosis one death, and bronchitis 10 deaths.

No. 2 South City District (Castle-street).—The deaths (18) are equal to an annual rate of 43·6 per 1,000. There were 2 deaths from broncho-pneumonia, 3 from tuberculous phthisis (*phthisis*), and 7 from bronchitis.

No. 3 South City District (Peter-street).—The deaths (30) are equal to an annual rate of 36·6 per 1,000, and include 2 deaths from diarrhoeal diseases, one from influenza, one from broncho-pneumonia, 2 from *pneumonia* (not defined), 5 from tuberculous disease, 4 from bronchitis, and one death of an infant by suffocation in bed.

No. 4 South City District (Grand Canal-street).—The deaths (18) are equivalent to an annual rate of 26·4 per 1,000. Whooping-cough and broncho-pneumonia each caused one death, and there were 2 deaths from bronchitis.

New Kilmainham District.—The deaths (3) are equal to an annual rate of 17·4 per 1,000. Of the 3 deaths one was from *pneumonia* (not defined).

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar 15·7; Pembroke, 22·0; Blackrock, 17·9; and Kingstown, 3·0. The only death from any of the principal epidemic diseases tabulated for these districts is one from scarlet fever for Rathmines and Rathgar, the 11 deaths from all causes for this district including also one death from *phthisis*, and 3 deaths from bronchitis. Among the 12 deaths from all causes for Pembroke are 3 from broncho-pneumonia, one from tuberculous meningitis, and 3 from bronchitis; of the 3 deaths from all causes for Blackrock one is from broncho-pneumonia, and 2 are from bronchitis; and the only death recorded for Kingstown is one from *phthisis*.

* See Columns 10-13 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," and the "Tuberculosis Prevention (Ireland) Act, 1908," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 1st January, 1910, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 1st January, 1910, and the number under treatment at the close of each of the 3 preceding weeks.

From this it appears that:—

Four cases of measles were admitted to hospital during the week, 5 were discharged, and 17 cases remained under treatment at the close of the week.

Four cases of scarlet fever were admitted to hospital, 8 were discharged, there were 3 deaths, and 71* cases remained under treatment at the close of the week. At the close of the 3 preceding weeks the cases in hospital were 95, 97, and 78, respectively.

One case of typhus was admitted to hospital during the week, there was one death, and 6 cases remained under treatment in hospital at its close.

Eleven cases of diphtheria were admitted to hospital, 8 were discharged, there were two deaths, and 38 patients remained under treatment at the close of the week. The cases in hospital at the close of the 3 preceding weeks numbered 30, 38, and 37, respectively.

Seven cases of enteric fever were admitted to hospital during the week, 2 were discharged, there was one death, and 44 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 6 cases of pneumonia were admitted to hospital, 6 were discharged, there were 2 deaths, and 29 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 16.2) was equal to an average annual death-rate of 16.6 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 18.9 per 1,000, the rate for Glasgow being 20.8 and for Edinburgh 15.9.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 1st January. From this report it appears that of a total of 43 cases notified, 17 were scarlet fever, 11 diphtheria, 9 phthisis, and 6 erysipelas. Among the 414 cases of infectious diseases in hospital at the close of the week were 230 cases of scarlet fever, 79 of measles, 48 of phthisis, 29 of diphtheria, 10 of erysipelas, 8 of whooping-cough, 3 of chicken-pox, 2 of cerebro-spinal fever, one of enteric fever, and one of puerperal fever.

* See note (*) at foot of Table XII.

TABLE II.—BIRTHS and DEATHS registered during the Week ending Saturday, 1st January, 1910, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (Exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertained Deaths: also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 1st January, 1910:—

"With only temporary and partial intermissions, this week was as mild and even warm as the preceding week had been cold. Throughout the first three days of the period a strong warm, moist Atlantic air-current swept over the greater part of Europe, open weather prevailing everywhere except in Iceland, Lapland, and Central Sweden. The predominant S.W. wind and warm, humid weather were dependent on the passage north-eastwards across the Atlantic of a series of atmospheric depressions. One of these systems was central off the North of Scotland on Sunday morning, when the barometer ranged from 29.01 inches at Stornoway in the Hebrides to 30.40 inches in Portugal. By Tuesday morning another depression reached the Hebrides from S.W., the barometer falling at Stornoway to 28.96 inches. This disturbance afterwards passed quickly eastwards across Denmark to the Baltic and Russia, being followed by a tongue or ridge of high pressure, which travelled almost as fast in the same direction, or a brief spell temperature gave way within the area of high pressure, but on Thursday morning steep gradients over S.W. winds were again found over Iceland, the North Atlantic in general, Ireland, Scotland, and Norway. At 1 p.m. a fine lunar rainbow was seen in Dublin as showers were carried on the strong S.W. wind in the moonlight. A second chill occurred on Friday, but at night a lunar halo was the harbinger of clouds, warmth and damp which ushered in the New Year and were connected with a very deep depression over Iceland (barometer down to 28.34 inches at Isafjord at 7 a.m.). Except on Wednesday, which was calm and foggy, the wind was fresh to strong, blowing almost all through the week from points between S. and W. In Dublin the mean height of the barometer was 29.910 inches, the range of pressure being from 29.333 inches at 9 p.m. of Monday (wind, S.S.W., strong) to 30.227 inches at 9 p.m. of Wednesday (wind, S.W.). The corrected mean temperature was 47.6°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 47.7°. On Monday and Tuesday the screened thermometers rose to 56.2°. On Wednesday they fell to 34.6°. S.W. winds prevailed. The rainfall was .233 inch on two days, .159 inch being recorded on Monday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.752 inches. The highest reading (30.162) was on Friday at 9 p.m., wind W.S.W., and the lowest (29.189) on Monday at 9 p.m., wind S.S.W.

The mean temperature for the week was 45.9°, being 5.6° above the average for the corresponding period of the 10 years, 1899-1908. The temperature was highest on Monday, on which day the thermometer registered 55.1°, and was lowest on Wednesday, the mercury having fallen to 29.9°. The mean of the Dry Bulb for the week was 46.8° and of the Wet Bulb 45.2°. The mean humidity of the air was .88, complete saturation being represented by 1.0. The rainfall during the week measured 0.340 inch.

At Greenwich the mean temperature for the week was 44.4°, the maximum 53.5°, and the minimum 28.2°; at Glasgow the maximum was 52.8°, the minimum 31.0°, and the mean 43.1°; and at Edinburgh the maximum was 51.2°, the minimum 30.7°, and the mean 41.8°. The rainfall at Greenwich measured 0.27 in., at Glasgow 1.46 ins., and at Edinburgh 0.74 in.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

TABLE XIII.—METEOROLOGICAL OBSERVATIONS taken at the ORDNANCE SURVEY OFFICE, PHOENIX PARK, DUBLIN. (Height above mean sea level 155.3 feet.)

VOL. XLVI.] QUARTER ENDING SATURDAY, 1ST JANUARY, 1910. [No. 52A.

DUBLIN REGISTRATION AREA.—Births.—In the Dublin Registration Area, which consists of the city of Dublin and the urban districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, the total area thereof being 13,757 statute acres, and the population, estimated to the middle of 1909, 398,356, there were registered during the thirteen weeks ended on Saturday, 1st January, 1910, 2,638 births—1,414 boys and 1,224 girls—being equal to an annual ratio of 1 in 37·8, or 26·5 in every 1,000 of the population.

The number of births registered in the city was 2,277, equivalent to an annual rate of 29·7 in every 1,000 of the population; and in the urban districts named above, 361, equal to an annual rate of 15·8 in every 1,000 of the population.

There were registered in London during the same period 28,150 births—being equal to an annual birth-rate of 23·3 in every 1,000 of the estimated population; in Glasgow there were registered 5,175, being equal to 23·7 per 1,000; and in Edinburgh, 1,724—a number affording an annual birth-rate of 19·4 in every 1,000 of the estimated population.

Deaths.—The number of deaths registered in the Dublin Registration Area during the quarter was 2,092—1,062 males and 1,030 females—affording an annual ratio of 1 in 47·6, or 21·0 in every 1,000 of the estimated population; omitting the deaths (105) of persons admitted into Public Institutions from localities outside the Area, the rate was 20·0 per 1,000. The annual mean mortality represented by the deaths registered during the fourth quarter of the ten years, 1899–1908, in the Dublin Registration Area as then constituted, was 24·7 per 1,000 of the estimated mean population of those years.

The number of deaths of inhabitants* of the North City districts registered last quarter was 810, representing an annual mortality of 20·6 in every 1,000 of the population; and the number in the South City districts was 821, equivalent to a rate of 21·9 per 1,000. In the urban districts the number of deaths registered was 356, being equal to an annual death-rate of 15·6 in every 1,000.

The number of deaths registered in London during the same period was 17,005—a number equal to an annual rate of mortality of 14·1 in every 1,000 of the inhabitants; in Glasgow the number was 4,551, equal to 20·9 in every 1,000; and in Edinburgh, 1,312, affording an annual death-rate of 14·8 in every 1,000 of the estimated population.

Diseases.—The number of deaths from the principal epidemic diseases† registered in the Dublin Registration Area during last quarter was 91, being 114 under the number for the preceding quarter; and the annual rate per 1,000 of the population represented by the deaths from these diseases was 0·9, being 1·2 below the rate for the preceding three months.

The following tabular statement shows the mortality from each of the principal epidemic diseases in the period under notice, and the average number of deaths from these diseases which occurred in the corresponding period of the 10 years, 1899–1908:—

| NAMES OF DISEASES. | No. of Deaths in December Quarter, 1909. | Average No. of Deaths in December Quarters, 1899– 1908. |
|-------------------------------------|--|---|
| Small-pox, - - - - | - | - |
| Measles, - - - - | 5 | 83 |
| Scarlet Fever, - - - - | 10 | 10 |
| Typhus, - - - - | 1 | 1 |
| Whooping-cough, - - - - | 16 | 25 |
| Diphtheria, - - - - | 10 | 15 |
| Pyrexia (origin uncertain), - - - - | - | 2 |
| Enteric Fever, - - - - | 12 | 31 |
| Diarrhoeal Diseases, - - - - | 37 | 70 |

Small-pox.—In the period under notice, there was no record of mortality from small-pox, neither was there any report received in the Registrar-General's Office regarding the existence of the disease in the Dublin Registration area.

Measles.—The Deaths from measles were 5 in number, the average for the December quarter of the 10 years, 1899–1908, being 83; of the 5 deaths, 4 appertained to the district of North City No. 1, East. From the Dublin hospitals return, on page 860, it appears that there were 5 cases of measles under treatment at the close of the previous quarter, 32 cases were admitted during the period under notice, 20 were discharged, and 17 cases remained under treatment at the close of the quarter. In each of the 3 preceding quarters deaths from measles were 75, 30, and 11.

Scarlet Fever.—There were 10 deaths from scarlet fever registered during the quarter, this figure being equal to the average, but above the number (6) registered in the preceding quarter. Of the deaths, one appertains to North Dublin city, 5 appertain to South Dublin city, 2 to Rathmines and Rathgar urban district, and one to Pembroke urban district. In Table I., page 860, the number of cases which were treated for scarlet fever in Dublin Hospitals, and how the cases were disposed of, may be seen; from this it appears that 77 cases were in

*The death-rates referring to the several Dublin Districts have been calculated on the mortality for the respective districts as corrected by the distribution of deaths in Public Institutions according to the localities from which the deceased persons were admitted.

† See note (*), p. 864b.

hospitals at the end of September quarter, 196 cases were admitted, 191 were discharged, there were 11 deaths in hospitals, and 71 cases remained under treatment (exclusive of 21 patients in Beneavin) at the close of the period. The deaths registered represent an annual rate of 0.10 per 1,000 of the estimated population.

Typhus.—As in each of the two quarters preceding, one death from typhus was registered, this death being of a person admitted to hospital from the district of No. 2 North Dublin City. It may be seen in Table I. that altogether 15 cases of typhus were treated in hospitals; of these 7 were discharged, 2 died in hospital, and 6 remained under treatment on 1st January, 1910.

Whooping-cough.—The annual rate representing the deaths from whooping-cough, 16 in number, was 0.16 per 1,000 of the population of the Dublin Registration Area estimated to the middle of the year 1909. The deaths are under the average (25). In Table II. the districts to which the deaths belonged are shown; it may be seen that 8 deaths from whooping-cough appertain to the city districts of North Dublin, 5 to South Dublin, 2 to Rathmines and Rathgar, and one to Kingstown.

Diphtheria.—The mortality from diphtheria which in the March quarter of the year, numbered 23 deaths, declined to 9 in June quarter, rose to 18 in September quarter, but declined to 10 in the quarter under notice; the 10 deaths are equal to an annual rate of 0.10 per 1,000 of the estimated population, and are under the average for the corresponding quarter of the past 10 years by 5. Of the 10 deaths, 3 belonged to North Dublin city districts, 6 to South Dublin city districts, and one to Kingstown urban district. According to the hospital statistics 181 cases of diphtheria were under treatment, 135 were discharged, there were 8 deaths, and 38 cases remained under treatment at the close of the quarterly period.

Enteric Fever.—During the quarter, 12 deaths from enteric fever were recorded, the average being 31. The 12 deaths represent an annual rate of 0.12 per 1,000 of the population; the deaths in each of the preceding quarterly periods were 25, 17, and 14, showing a gradual decrease for each quarter of the year 1909. It may be seen in Table II. that of the 12 deaths 8 appertained to North Dublin city districts (5 of these belonging to North City No. 2 district), one appertained to the district of South City No. 1, one to Rathmines and Rathgar urban district, one to Kingstown urban district, and one death was of a person admitted to hospital from without the Dublin Registration Area. The hospital statistics show that of 153 cases of enteric fever which were treated 103 were discharged, 6 died, and 44 remained under treatment when the period closed.

Diarrhœal Diseases.—From the returns, it appears that the deaths from diarrhœal diseases were 37 in number, 35 being of children under 5 years of age; the total is well below the average (70) for the corresponding quarterly period in the 10 years preceding. The deaths represent a rate of 0.37 per 1,000 of the estimated population. In the 3 preceding quarters of the year, diarrhœal deaths numbered 20, 23, and 132 respectively.

Influenza.—There was an increase in the mortality from influenza during the period under notice, as compared with that in the quarter preceding, amounting to 21 deaths, 3 having occurred in the latter period and 24 in the former, the average for the fourth quarter of the 10 years, 1899–1908 being 18 deaths. The 24 deaths represent a rate of 0.24 per 1,000 of the estimated population.

Cerebro-spinal Fever.—In the 4 quarters of the year 1909, the number of deaths from cerebro-spinal fever were 2, 2, 7, and 2 respectively.

Pneumonia.—An increase in the number of deaths from pneumonia (all forms) over the average—160—and over the number—96—registered in the preceding quarter is shown in the number returned for the period under notice, namely, 201. The latter figure is equal to an annual rate of 2.02 per 1,000 of the estimated population of the Area.

Tuberculous Disease.—In the aggregate the deaths from all forms of tuberculous disease amounted to 319. This figure includes 240 deaths from tuberculous phthisis (*phthisis*), 36 from tuberculous meningitis, 8 from tuberculous peritonitis, 2 from *tabes mesenterica*, and 33 deaths from other forms of the disease. The total deaths correspond to an annual rate of 3·20 per 1,000, the rate for the deaths from tuberculous phthisis, in number 240, corresponding to an annual rate of 2·41 per 1,000. From Table II. it may be gathered that deaths from all forms of tuberculous disease in North Dublin city districts were 125; in South Dublin city districts, 136; in Rathmines, 11; in Pembroke, 14; in Blackrock, 3; and in Kingstown, 9. These figures correspond to the following rates:—3·18, 3·63, 1·20, 1·96, 1·37, and 2·04 per 1,000, respectively.

Malignant Diseases.—Under this head the deaths from carcinoma, sarcoma, and cancer, malignant disease (undefined) are classified. In the total, such deaths were 106, and correspond to a rate of 1·06 per 1,000.

Premature Births.—There were 50 infants, prematurely born, whose deaths were registered during the quarter.

Diseases of the Brain and Nervous System.—The total deaths assigned to causes included under this heading number 145, equal to an annual rate of 1·46 per 1,000. The deaths of 37 children under 5 years of age from *convulsions* is included in the above total.

Diseases of the Heart and Blood Vessels.—No less than 323 deaths were referred to diseases of the heart and blood vessels. The total figure represents an annual death rate of 3·24 per 1,000 of the estimated population of the Area.

Diseases of the Respiratory System.—The deaths under this heading amounted to 287; this figure includes the deaths of 252 persons from bronchitis. The total represents an annual death rate of 2·88 per 1,000 of the estimated population of the Area.

Accidental Violence.—Of 42 deaths, which were assigned to accident or negligence, 13 were by burns or scalds (6 of these were deaths of children under 5 years of age), 5 were by vehicles and horses, 4 were by drowning, 2 were by poisons or poisonous vapours, and one was of an infant by suffocation in bed.

Homicide.—There was one death attributable to homicide.

Suicide.—Three deaths by self-destruction were recorded.

TABLE I.—THE NUMBER OF CASES OF THE UNDERMENTIONED DISEASES treated in Dublin Hospitals during the **Quarter** (13 weeks) **ended Saturday, 1st January, 1910.**

| DISEASES | No. of Cases in Hospital at close of previous quarter. | No. admitted during quarter. | Discharged. | Died. | No. under treatment on above date. |
|----------------------|--|------------------------------|-------------|-------|------------------------------------|
| Small-pox, . . . | — | — | — | — | — |
| Measles, . . . | 5 | 32 | 20 | — | 17 |
| Scarlet Fever, . . . | 77 | 196 | 191 | 11 | 71* |
| Typhus, . . . | 4 | 11 | 7 | 2 | 6 |
| Diphtheria, . . . | 36 | 145 | 135 | 8 | 38 |
| Enteric Fever, . . . | 55 | 98 | 103 | 6 | 44 |
| Pneumonia, . . . | 17 | 149 | 114 | 23 | 29 |

* Exclusive of 21 patients in Beneavin, the convalescent home of Cork-street Fever Hospital.

In 59 instances the cause of death was uncertified, there having been no medical attendant during the last illness. Of the 59 cases, 29 (or 49·2 per cent.) were deaths of children under 5 years of age: these 29 deaths form 5·2 per cent. of the total number of deaths of children of that age-period. Of the deaths of 125 infants under one month old registered, there were 16 (or 12·8 per cent.) regarding which the cause was uncertified.

From Table II., on pages 862-3, it will be seen that, excluding 105 deaths of persons admitted into Public Institutions from localities outside the Dublin Registration Area, the number of deaths registered during the quarter was 1,987, equal to an annual rate of 20·0 per 1,000 of the estimated population, and that 88 of these deaths, representing an annual rate of 0·9 per 1,000 persons, were caused by the principal epidemic diseases.* The death-rate for the city (from all causes) was 21·3 per 1,000, and for the urban districts 15·6 per 1,000. The death-rate represented by the mortality from the principal epidemic diseases in the city was 1·0, and in the urban districts 0·6, the rates for the several districts varying from 0·0 in Blackrock urban district, to 2·1 in North City, No. 2, the 201 deaths from all causes for that district including one from typhus, 3 from whooping-cough, 5 from enteric fever, and 7 from diarrhoeal diseases.

Occupations.—Table III., on pages 864-4a, shows the occupations or social position of the persons whose deaths were registered during the quarter, the various callings being grouped in classes and orders, so as to show the respective rates of mortality in the several social grades of the population. From this Table it will be observed that the deaths in families of the "Professional and Independent Class" were equal to an annual rate of 15·6 per 1,000 of the persons in that class according to the Census of 1901; in the "Middle Class" the death-rate was 15·8 per 1,000; among the "Artisan Class and Petty Shopkeepers" it was 15·9; and in the "General Service Class" it was 22·2.

Ages.—Of the 2,092 persons whose deaths were registered in the Dublin Registration Area during the quarter, 555 were under 5 years of age, including 383 infants under one year of age, the latter representing a rate of 145·2 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 58·2 in every 1,000 children at that age (according to the Census of 1901); 134 were between the ages of 5 and 20, representing an annual rate of 5·0 per 1,000 persons of that age period; the total number under 20 years being equal to an annual mortality of 19·0 per 1,000 of the population at that age period (according to the Census of 1901); 292, or 8·6 per 1,000 persons, were between 20 and 40; 482, or 28·1 per 1,000, between 40 and 60; 540, or 89·0 per 1,000, between 60 and 80; 89, or 187·0 per 1,000, were aged 80 and upwards, including 13 persons aged 90 and upwards.

Public Institutions.—Of the 2,092 deaths recorded during the quarter, 887, or 42·4 per cent., occurred in public institutions, viz., 504 in the various hospitals, prisons, and lunatic asylums; 163 in the North Dublin Union Workhouse; 213 in the South Dublin Union Workhouse; and 7 (those of persons admitted from within the Dublin Registration Area) in the Rathdown Union Workhouse.

Weather.—The mean temperature for thirteen weeks, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, was 43·2°. At Greenwich, for the quarter, it was 44·6°; and at Edinburgh, 41·2°.

The rainfall at Dublin during the thirteen weeks measured 8·431 inches; at Greenwich, 7·32 inches; and at Edinburgh, 8·24 inches.

* See note (*), page 864b.

TABLE II.—Showing for the **Quarter** (13 weeks) ended **1st January, 1910**, the number **AREA**, the annual Rate per 1,000 of the Population of the respective Districts represented the principal causes; also the Deaths at certain age-periods, and the number of Uncertified were admitted.

* Formerly described as "Simple Continued Fever."

Twenty-two Principal Town Districts of Ireland.—The average annual death-rate represented by the deaths from all causes registered during last quarter in the Dublin Registration Area and twenty-one of the principal Urban Districts of Ireland (exclusive of deaths in Public Institutions of persons admitted from without the districts), was 19·0 per 1,000 persons, the respective rates for the several districts being as follow, ranging in order from the lowest to the highest :—Clonmel, 8·7 ; Queenstown, 11·6 ; Dundalk, 12·8 ; Tralee, 15·4 ; Waterford, 15·8 ; Portadown, 15·9 ; Lurgan, 16·3 ; Galway, 16·7 ; Sligo, 16·9 ; Londonderry, 17·0 ; Kilkenny, 17·3 ; Limerick, 17·6 ; Newry, 17·7 ; Wexford, 17·9 ; Armagh, 18·5 ; Belfast, 19·0 ; Drogheda, 19·4 ; Dublin Registration Area, 20·0 ; Newtownards, 20·6 ; Ballymena, 21·3 ; Cork, 21·8 ; and Lisburn 22·7.

The average annual rate represented by the deaths from the principal epidemic diseases* in the 22 districts is 1·1 per 1,000 of the population, the rates varying from 0·0 in Portadown to 3·1 in Newtownards ; the 47 deaths from all causes for that district including 3 from whooping-cough, one from diphtheria, and 3 from diarrhoeal diseases. The 1,836 deaths from all causes for Belfast include one from scarlet fever, 82 from whooping-cough, 3 from diphtheria, 8 from enteric fever, and 41 from diarrhoeal diseases.

The following is a synopsis of the mortality from the principal epidemic diseases* in the *twenty-one provincial urban districts* already named, and Tables IV. and V. give in detail the results of the registration for the quarter :—

Small-pox.—It appears from Table IV. that there was no record of deaths from small-pox in the 22 town districts of Ireland in the period under notice.

Measles.—In each of Londonderry, Galway, and Dundalk, one death from measles was registered.

Scarlet Fever.—In Belfast one death, and in Cork 2 deaths from scarlet fever were registered.

Typhus.—There was one death from typhus in Galway.

Whooping-cough caused 82 deaths in Belfast (representing an annual rate of 0·85 per 1,000 of the estimated population), 4 in Cork, 12 in Limerick (representing an annual rate of 1·26 per 1,000 of the Census population in 1901) ; 5 in Waterford (representing an annual rate of 0·75 per 1,000) ; one in Ballymena ; 6 in Tralee (representing an annual rate of 2·43 per 1,000 of the Census population in 1901) ; 3 in Newtownards, and one in Armagh.

Diphtheria.—In Belfast 3 deaths were registered, and in each of Londonderry, Lurgan, Ballymena, Clonmel and Newtownards there was one death.

Enteric Fever.—Of 21 deaths, 8 were recorded for Belfast ; 6 for Cork ; one for Limerick ; 4 for Drogheda ; one for Newry ; and one for Lisburn.

Diarrhoeal Diseases.—Among the 85 deaths registered from these diseases, 41 appertained to Belfast, 18 to Cork, 5 to Sligo, and 4 deaths each to Londonderry and Waterford.

Cerebro-spinal Fever.—There was one death from cerebro-spinal fever in Belfast during the period under notice. In the three preceding quarters, deaths from cerebro-spinal fever or *cerebro-spinal meningitis* numbered 12, 5, and 2, respectively.

Phthisis.—The death-rate from phthisis for the 22 towns in the aggregate was 2·0 per 1,000 of the population ; for the Dublin Registration Area it was 2·2 per 1,000, for Belfast County Borough 1·6 per 1,000, and for the Urban Districts collectively (exclusive of Belfast and Dublin Registration Area), it was 2·0 per 1,000, exclusive of deaths in public institutions of persons admitted from without the respective areas.

* Small-pox, measles, scarlet fever, typhus, whooping-cough, diphtheria, *pyrexia* (origin uncertain), enteric fever, and diarrhoeal diseases.

REGISTRATION—QUARTER (13 WEEKS) ENDING SATURDAY, 1ST JANUARY, 1910.

*The population given for the Dublin Registration Area and its component parts, and the cities of Belfast and Londonderry, is that estimated to the middle of the year 1909; that for each of the other districts is the Population according to the Census of 1901.

† Formerly described as 'simple continued fever.'
